ABSTRACT

This trend manual contains data about the Peralta Community College District (PCCD) in California. Data cover the District's service area; students, including enrollment, demographics, success, and outcomes; instructional programs; and faculty and staff. In addition, the report addresses various accountability measures adopted by both the state and federal government, the state chancellor's office, and accrediting agencies. The PCCD serves the six cities in northern Alameda County. The ethnic composition of these cities varies from 35% African American and 24% White in Oakland, to 77% White and 16% Asian/Pacific Islander in Piedmont. In the fall of the year 2000, 30% of PCCD's enrollment was African American, 24% Asian/Pacific Islander, 12% Hispanic, 1% Native American, and 22% White. Students enrolled in Peralta colleges were most likely to be either traditional college age (19-24, 35%), or in their middle years (35-54, 23%). In the year 2000, district enrollment was 60% female and 39% male, compared with 58% female and 42% male in 1994. In addition, 25% of PCCD students were enrolled full time, with 63% of students enrolled in day classes. The goal of 27% of PCCD students was to transfer, 5% were aiming for a degree or certificate, 23% are learning job skills, 19% were attending for educational enrichment, 2% were attending to acquire basic skills, and 24% attend for other reasons. Includes numerous tables and figures. (NB)

PREFACE

Peralta Facts 2000 is a reference manual, containing trend data concerning the District's service area, Peralta's students and faculty, staff instructional programs and services. Data and analysis contained in this volume provides background information to facilitate policy analysis and decision-making. Intended audiences for this compendium are Peralta managers, faculty and staff, as well as other interested educational institutions and the community served by the District. We hope that it will be useful in analyzing information for Program Review and that it will facilitate the work for accreditation self-studies.

The source for the data is the Office of Institutional Development's data warehouse. These data are updated each term from Peralta's mainframe computer. The data warehouse originates from the same source as the Management Information system (MIS) data sent to the state Chancellor's Office of the California Community Colleges. Differences in numbers between this and other documents may occur because of the particular criteria applied when the data are selected. For example, the count of students for enrollment is based on all students who enrolled in and attended at least one class in a term. Other sources may use census date enrollment, which represents all students who were enrolled in at least one class on the census date of the term as defined by state regulations.

This report was prepared under the direction of Dr. Chuen-Rong Chan, Director Research and Institutional Development. We would like to express our appreciation to the staff of the Office of Institutional Development specifically Bruce Hawkins, Jo Ann Phillips, Sheryl Queen, and Nha Le for their diligence and commitment in putting this book together. Special appreciation is also extended to Dr. Kristen Kline for her invaluable assistance on this project.

Any comments or suggestions about the contents of this manual may be directed to Dr. Chuen-Rong Chan at 466-7300.

Introduction

Peralta Facts 2000 is a reference manual, containing trend data about the District's service area; students, including enrollment, demographics, success and outcomes; instructional programs; faculty and staff. Information contained in this volume is intended as a resource for Peralta managers, faculty and staff to facilitate policy analysis, program planning and decision-making.

In addition, *Peralta Facts 2000* addresses various accountability measures adopted by both the state and federal government, State Chancellor's Office, and accrediting agencies.

- Assembly Bill 1725 (1988) requires the Board of Governors of the California Community Colleges to develop and implement a comprehensive accountability program focused on systemwide collection and reporting of information concerning: student access; student success; student satisfaction; staff composition; and fiscal condition. Assembly Bill 1808 (1991) elaborates on the provisions of AB 1725 to expand reporting requirements.
- In 1998, Senate Bill 645 established The Partnership for Excellence Program (PFE) as a means of implementing the commitment of the California Community Colleges to significantly expand their contribution to the social and economic success of California. Districts are required to report on their progress in contributing to statewide goals in five areas of performance: (1) transfer; (2) degrees and certificates; (3) successful course completion; (4) workforce development; and (5) basic skills improvement.
- The Student Equity Program requires annual reporting by individual colleges to the State of California concerning: access; retention; degree and certificate completion; ESL; basic skills completion; and transfer for each of the historically underrepresented groups.
- With the amendments of 1998 (HR 1853), the federal government extended provisions of the Carl D. Perkins Vocational and Applied Technology Education Act to all populations. Previous amendments to this legislation had strengthened accountability requirements, requiring states to report annually on selected benchmarks designed to indicate progress in achieving a state's goals, including placement and retention, increased earnings, and skill mastery.
- The Western Association of Schools and Colleges (WASC) provides in its accreditation standards for assessment of "Institutional Integrity, Purposes, Planning and Effectiveness;" this standard requires that the "planning process uses the results of institutional research on subjects such as institutional effectiveness, student outcomes, and demographics" (1C.2) and, further, that "institutional research and program review are conducted as essential elements in planning and evaluating institutional effectiveness" (1D.1).

We hope the data displayed on the following pages will assist the colleges in ensuring access to a quality education to students and successful fulfillment of the district's mission, as well as compliance with state and federal requirements.

Historical Background - District and Colleges

The Peralta Community College District, established in 1964, is a system of public two-year colleges, serving the residents of the cities of Oakland, Berkeley, Alameda, Piedmont, Emeryville, and Albany. It consists of four colleges—College of Alameda, Laney, Merritt and Vista—and one community education center at Fruitvale operated by Merritt College. The district was born out of several institutions, including The Part Time School, Central Trade—later renamed the Joseph C. Laney Trade and Technical Institute—and the Merritt School of Business.

- In July 1953, the Oakland Board of Education organized Oakland Junior College and developed what are now Laney and Merritt Colleges as separate campuses of this new institution.
- In September 1954, the Merritt campus instituted a liberal arts division in addition to its business division, and the following year students were able to earn an associate in arts degree. Shortly thereafter, the name was changed to Oakland City College.
- In November 1963, the residents of Alameda, Albany, Berkeley, Emeryville, Oakland, and Piedmont voted to join with Oakland to establish a separate junior college district.
- On July 1, 1964, the Peralta Community College District was officially formed. Each of the existing campuses would become a comprehensive college, offering vocational, occupational and liberal arts courses.
- In 1965, the voters of the new district passed a \$47 million bond issue for construction of several new campuses.
- In June of 1970, the College of Alameda opened on a 2.5-acre site near the Naval Air Station in the City of Alameda.
- In September of 1970, Laney College, located next to the Oakland Museum and the BART terminal, completed its modern new buildings.
- In 1971, Merritt College moved from its Grove Street home to the East Oakland hills near Skyline Boulevard off Redwood Road.
- In 1974, the Peralta College for Nontraditional Study was established. This institution later became Vista Community College.
- In 1992 a \$50 million bond measure was passed by voters to support the renovation and upgrade of existing facilities and infrastructure and for the development of new programs.
- In 1996 voters approved a capital bond measure to construct a permanent campus site in northern Alameda County.
- In 2000, voters passed a \$153 million bond measure to repair and rehabilitate college facilities and to build a permanent campus for Vista College.

The College of Alameda, Laney, Merritt and Vista are comprehensive, two-year community colleges, offering an array of occupational and liberal arts programs. At each of these colleges, the comprehensive general education/transfer program prepares students for transfer to four-year institutions. In addition, Vista College contributes to the community's economic development through such programs as the Small Business Development Center and the Center for International Trade.

Mission Statement

"The mission of the Peralta Community College District is to provide accessible, high-quality adult learning opportunities to meet the educational needs of the multicultural East Bay community."

Vision

The Peralta Community College District will be an exemplary system by being responsive to the educational needs of our community, by providing learner-centered educational experiences, and by being committed to innovation and continuous improvement.

Values

1. The district is committed to: being accessible and supportive to all; seeking knowledge and truth in the classroom and in all decision-making processes; being encouraging of open inquiry and expression; and adhering to high ethical standards.
2. The district relies on and respects all our communities, works in partnership with civic organizations, businesses and other institutions, and responds to emerging training and educational needs. We are committed to being known as an accessible community resource providing opportunities for civic, recreational and cultural activities. We value diversity and the global nature of the future.
3. The district is dedicated to a state of evolution and improvement through research, planning, implementation and evaluation. The district is committed to embracing the challenges of the future in both good and bad times.

Adopted April 1998

Peralta Community College District Goals

Academic Standards, Achievement and Student Outcomes

1. Assess the quality of the existing instructional programs and recommend programs for continuation, improvement and enhancement or phase out if no longer viable or appropriate.
2. Promote a student-centered culture that ensures access, sustains educational excellence, fosters student development, and supports high levels of student achievement.
3. Monitor student academic progress and assess the performance of students for a three-year period after completing a PCCD program and/or transferring to four-year institution.
4. Strengthen the transfer mission of the district and increase the transfer rate of our students to four-year colleges and universities.

Community and Public Outreach

5. Build partnerships and alliances with business and industry, other educational institutions, and community-based organizations to meet the demand for workforce preparation and life long learning and support the training and educational needs of an international workforce.
6. Position the district to be a strong and significant partner in the economic development of the six cities in our service area.
7. Develop and implement a comprehensive marketing plan to promote the mission of the district and enhance enrollment growth.
8. Develop a distinctive and positive image for the district and a special "niche" for each of our colleges, predicated upon quality of performance and service to students and the community.
9. Rebuild the district's foundation as an effective instrument in support of the district and students.

District Management

10. Fully integrate the planning, assessment and budget process in order to be more effective and efficient and to make full use of institutional research and effectiveness indicators.
11. Review and make appropriate adjustments to the district's current organizational structure and staff and build a management team with a shared vision and high competence.
12. Remain committed to affirmative action and maintain employment practices that assure a superior and diverse workforce.
13. Restructure the district's budget and budget process to further improve financial efficiency to reflect the goals and priorities of the district and provide a rational bases for allocating the financial resources to the primary cost centers.
14. Upgrade and expand the use of technology in educational programming and administrative services to provide state-of-the-art equipment, information access, and facilities for students, faculty, and staff.
15. Substantially increase the amount of funds generated through competitive grants and other external funding sources.
16. Develop and recommend strategies to provide a competitive salary and benefit package for all employees of the district.
17. Develop and implement a comprehensive Human Resource Plan that includes the assessment of professional development needs, employee performance and development, and maximizes the benefits of shared governance.
18. Provide a working environment that promotes respect and civility, facilitates open and honest communication, courteous service to students, and is generally satisfying and self-fulfilling.

Adopted June 8, 1999

Notes and Definitions

Notes

Unless otherwise stated, the following notes apply to the contents of *Peralta Facts 2000*.

- The source for the data is the Office of Institutional Development's data warehouse. These data are updated each term from Peralta's mainframe computer. The data warehouse originates from the same source as the Management Information System (MIS) data sent to the state. Differences in numbers between this and other documents may occur because of the particular criteria applied when the data are selected. For example, the count of students for enrollment is based on all students who enrolled in and attended at least one class in a term. Other sources may use census date enrollment, which represents all students who were enrolled in at least one class on the census date of the term as defined by state regulations.
- When a breakdown of a category includes a group called "Unknown," this group includes all students who either left the category blank, or who marked "Unknown" or "Decline to state." When the "Unknown" category refers to age, it represents those whose age seems unreasonable for a community college student. The age may have resulted from an erroneous birth date entry.
- The ethnic categories are those currently defined in the California Community Colleges' MIS Data Element Dictionary. The category Asian includes those who identify Pacific Islander as their ethnic group.

Definitions

- **Enrollment** represents all students who enrolled in and attended at least one class in a term. This is headcount enrollment unless otherwise stated. Only credit enrollment is included in this document.
- The rate of **successful course completion** is computed as the sum of course enrollments receiving an official grade of A, B, C or Credit (CR) divided by attempted course enrollments. Attempted course enrollments is the sum of students receiving a grade of A, B, C, Credit (CR), D, No Credit (NC), F, Incomplete (I), or Withdrawal (W and MW).
- The **success rate** is computed as the sum of units for course enrollments receiving an official grade of A, B, C, or Credit (CR) divided by units for attempted course enrollments. Units for attempted course enrollments are those for courses where the student received a grade of A, B, C, Credit (CR), D, No Credit (NC), F, Incomplete (I), or Withdrawal (W and MW).
- The **student retention rate** is calculated as the number of students who complete at least one class with a grade other than "W" over the total number of students enrolled in at least one class.
- The **persistence rate** is the percentage of students (unduplicated headcount) enrolled at census date in the fall term, who enrolled in any course in the following spring term.

Service Area

Population The Peralta Community College District serves the six cities in northern Alameda County—Alameda, Albany, Berkeley, Emeryville, Piedmont, and Oakland. With a combined population of 608,764, this service area includes a range of city sizes—from Emeryville, at 6,882, to Oakland, at 399,484. These cities also vary with respect to ethnic composition—ranging from the predominantly white population of Piedmont to the significantly mixed ethnic composition of Oakland, where the largest ethnic group is African American. [Source: U.S. Census Bureau, Census 2000 Redistricting Data (Public Law 94-171) Summary File]

Ethnicity of the Peralta Service Area by City

Source: U.S. Census Bureau, Census 2000 Redistricting Data (Public Law 94-171) Summary File, Matrices PL1, PL2, PL3, and PL4.

Service Area Population by City			
	1990	2000	% Change
Alameda	73,979	72,259	-2.32%
Albany	16,327	16,444	0.72%
Berkeley	102,724	102,743	0.02%
Emeryville	5,740	6,882	19.90%
Oakland	372,242	399,484	7.32%
Piedmont	10,602	10,952	3.30%
Service Area Total	581,614	608,764	4.67%

Source: US Census Bureau

Income There is considerable variation in the mean household income of residents in Peralta's service area. For 2000, the mean household income of Piedmont residents is estimated to be nearly four times that of Oakland residents. By 2020, mean household income (in constant 1995 dollars) is expected to grow by 23 percent for Alameda County. Except for a lower rate of growth in Alameda (+16%), similar rates of growth are expected for households in the other Peralta service area cities. [ABAG, Projections 2000.]

Mean Household Income In Constant 1995 Dollars			
	1990	1995	2000
Alameda	59,400	60,300	65,200

Labor Force Participation Between 2000 and 2010, Alameda County's overall labor force participation rate is expected to decline from 64.6 to 63.4 percent. However, by 2020, it will rise to 67.3 percent, primarily due to increased participation by women in all age groups 20 through 64 years. [ABAG, Projections 2000.]

Employment During the period 2000-2020, employment in Alameda County is projected to grow by nearly 220,000 jobs. One-third (32%) of the growth will occur in the six Peralta area cities. The service sector (including business services) will have the largest percentage growth of any sector in the county, accounting for almost 110,000 jobs. Knowledge-based industries are expected to be the largest source of new jobs, including: movie and television production; multimedia; computers and electronics; telecommunications; environmental technology; biosciences; and travel/tourism. In Alameda County, the number of high tech jobs alone is expected to increase by 26% during this period. [ABAG, Projections 2000.]

Public School Enrollment Each of the cities in Peralta's service area operates a unified school district. In the 1999-00 academic year, the Peralta area public schools enrolled 81,975 students in K-12 public schools. Enrollment varies from just under 980 students in the Emery Unified School District to the Oakland Unified School District, which serves over 55,000 students. [California Department of Education, 99/00.]

**Ethnic Breakdown of Service Area (2000 Census)
K-12 Schools (99-00) & Peralta District (Fall 2000)**

Service area categories represent the Peralta District's 6 cities.

PI - Pacific Islander; Multi/No/Other - Multiple race, no response, other ethnic category

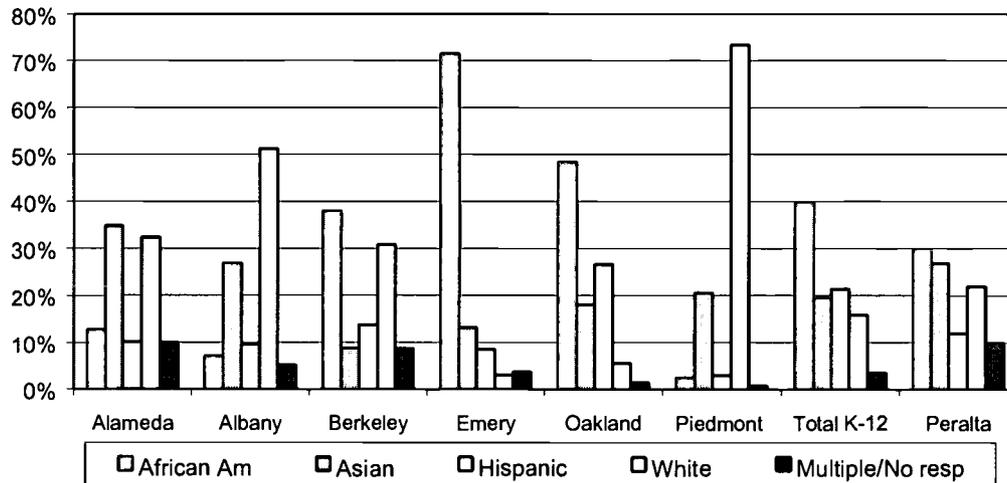

Source: Service Area, U.S. Census Bureau, Census 2000 Redistricting Data (Public Law 94-171) Summary File, Matrices PL1, PL2, PL3, and PL4.

Source: K-12 Districts, California Department of Education, Educational Demographics Unit, 3/13/01

In Oakland, often considered "the most integrated city anywhere," at least eighty-two different languages are spoken. Among students in the Oakland Unified School District one-third (35%) are "English Learners" (i.e., with primary language other than English); over one-half (61%) speak Spanish as their primary language; 14% speak Cantonese; 7% Vietnamese; 6% Cambodian; 4% Mien; and 8% other languages. [California Department of Education, Educational Demographics Unit, 3/31/01.]

The chart below shows the 1999-00 ethnic composition of the school districts in the Peralta service area, compared with that of the Peralta district in fall 2000.

Ethnicity of K-12 School Districts in Peralta's Service Area, 1999-00
(Includes PCCD, Fall 2000)

Note: The category Asian includes Filipino and Pacific Islander.
 Peralta's data are for Fall 2000
 Sources: California Department of Education, Educational Demographics Unit, 23/31/01

Public schools in the Peralta service area graduated a total of 3,482 students in the 1999-00 academic year; OUSD alone produced nearly one-half of all these graduates. Oakland's schools had the highest drop out rate (7.1%) among all districts within the Peralta service area. The next highest rate was for Alameda—at 1.6%. OUSD's dropout rates were highest for the category "Multi-Race/No Response" (20.6%). The next highest were among Whites (10.4%); rates for African Americans (8.0%) and Hispanics (8.0%) were also high, and lowest among Asians (3.6%). [California Department of Education, Educational Demographics Unit, 4/3/01.]

Based on two different measures, many of the students enrolled in the Oakland Unified School District (OUSD) come from households that are clearly in economic need. Six in ten students (59.9%) are eligible for free school meals; this compares with 32.7 percent in Berkeley, 49.2% in Emeryville, and 47.3% of K-12 students enrolled statewide. In the OUSD nearly a third (32.5%) are from households eligible for benefits under the California Work Opportunity and Responsibility to Kids (CalWORKS, formerly AFDC) program; this compares with 13.8% in Emeryville, 11.3% in Berkeley, and 14.1% statewide.). [California Department of Education, Educational Demographics Unit, 4/3/01.]

City of Residence for Peralta Students Eight in ten of Peralta's students reside within the six-city service area. Among students living in the Peralta service area over one-half reside in Oakland, the largest city in the county. For students enrolled districtwide, city of residence patterns changed relatively little between 1994 and 2000.

Among students enrolled at College of Alameda during Fall 2000, just under one-third (31%) resided in Alameda and another third (37%) in Oakland. The College of Alameda draws only about 17 percent of its students from cities outside the Peralta service area, as compared with 20 percent districtwide.

In 2000, the city of residence patterns of students enrolled at Laney and Merritt were similar, with over one-half of their students living in Oakland (51% and 55%, respectively). For each college, another two in ten of their students were from cities outside the Peralta service area.

Vista's students had a somewhat different residence pattern. In Fall 2000, four in ten (40%) were Berkeley residents, while another two in ten (19%) were Oakland residents. One-fourth (26%) of Vista's students resided in cities outside the Peralta service area.

When comparing Fall 1994 and 2000 enrollments at the Peralta colleges, small changes were observed in city of residence patterns. The College of Alameda and Merritt College appeared to be attracting larger proportions of their students from the communities in which they are located. For Laney and Vista, larger proportions of students were being attracted from cities outside the Peralta service area.

At the College of Alameda, a slightly larger proportion of students came from the City of Alameda (26 to 31%), while a smaller proportion came from Oakland (41 to 37%). At Laney College there was a slight increase (1%) in the proportions of students living in the City of Alameda and Emeryville. At Merritt, the proportion of students living in Oakland increased (53 to 55%), while there was a decline in the proportion (22 to 20%) from cities outside the service area. At Vista, the proportion of students living in Oakland decreased (21 to 19%), while the proportion increased (24 to 26%) for students residing in cities outside the Peralta service area.

New Peralta Students by High School District Attended One-third (31%) of new students who were “recent high school-leavers” –i.e., with high school graduation year within the last three years—had attended an Oakland public high school. Over four in ten (44%) had attended high school outside the Peralta service area.

The number of new students/recent high school leavers enrolled at Laney College was higher in 2000 than 1994—up from 846 to 1,113. The number was also higher at Vista—up from 202 to 338. Total number of new students/recent high school leavers was actually lower at College of Alameda (down from 660 to 604) and slightly lower (477 to 466) at Merritt.

Although numbers of new students/recent high school leavers enrolled at College of Alameda did not increase between 1994 and 2000, the pattern of high school district attended did change. New students coming increasingly from Alameda schools (17 to 26%) but less often from Oakland (41 to 34%).

At Laney College there was little change in the pattern of high school attended—54 percent came from schools inside the Peralta service area and 46 percent from other high schools. At Merritt, new student enrollment drew less from Oakland schools (46 to 35%) and more from outside the service area (34 to 45%). Over this period, Vista's new students came increasingly from Berkeley schools (14 to 21%) and slightly less from high schools outside Peralta's service area (63 to 62%).

The population for this chart consists of new Peralta students who left high school within three years of the term.

Example: in Fall 2000 the last year in high school would be 1998, 1999 or 2000.

The last year in high school is self declared on the application form.

Fall Term Enrollment

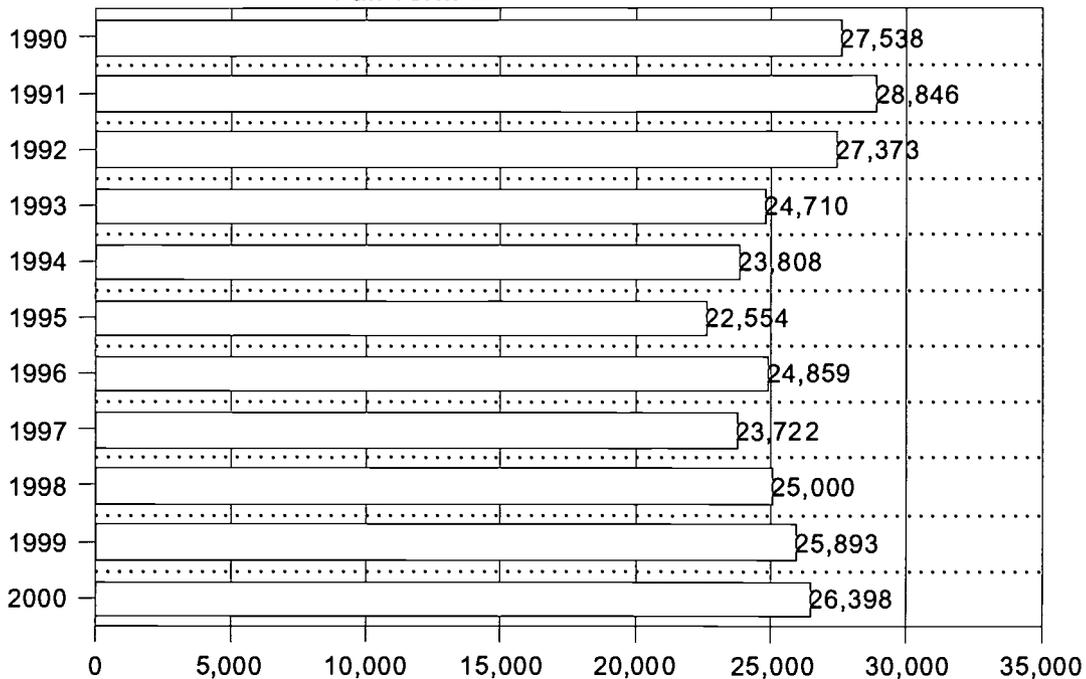

Over the past ten years, enrollment trends in the Peralta Community College District have closely mirrored the fluctuations in the California economy and the availability of state funding for higher education. Enrollment dropped between Fall 1992 and Fall 1993 due to the imposition of a \$50 per unit fee for students who already possessed a bachelor's degree (fee differential). Statewide there was a 9% decline in enrollment while the Peralta district showed a 9.7% decline. However, the impact at the colleges was quite different. Laney suffered only a 1.8% loss while Vista's enrollment declined by 25.2%.

The Peralta enrollment declined 4% from 1990 to 2000, while the decrease in high school graduates from the Peralta feeder schools from 1989 to 1998 was 6%.

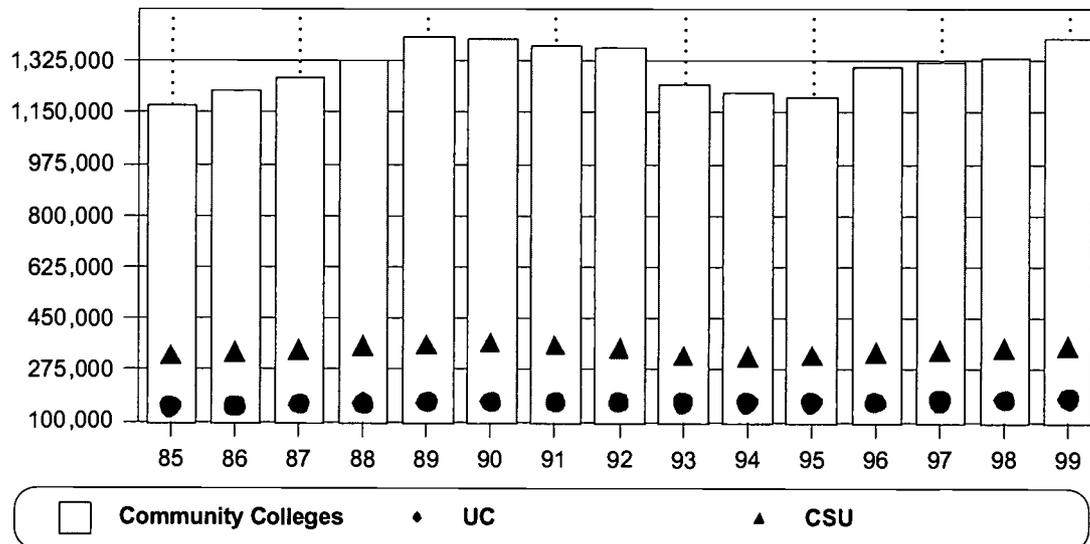

Over the past six years, however there has been a recovery in enrollment. With the exception of 1997 the headcount enrollment at Peralta has risen steadily from a low of 22,554 in 1995 to 26,398 in 2000. The increase by college has been: Alameda (12%), Laney (19%), Merritt (20%) and Vista (37%). Due to an increase in students attending more than one college in the same term, three of the four colleges had greater percentage increases than the district (17%) during the period, with Vista's rate more than double the overall growth. On the other hand, due to a greater proportion of students attending part-time (probably employment related) the increase in FTES did not keep pace with the headcount.

The 10% increase in enrollment from 1995 to 1996 may have been largely due to the sunset of the legislation establishing the fee differential. Because there was a sharp enrollment decrease in Fall 1997, the steady increase which followed can only in small part be attributed to lower fees for students with higher degrees.

**Peralta Community College District
Fall Term Enrollment 1990-2000**

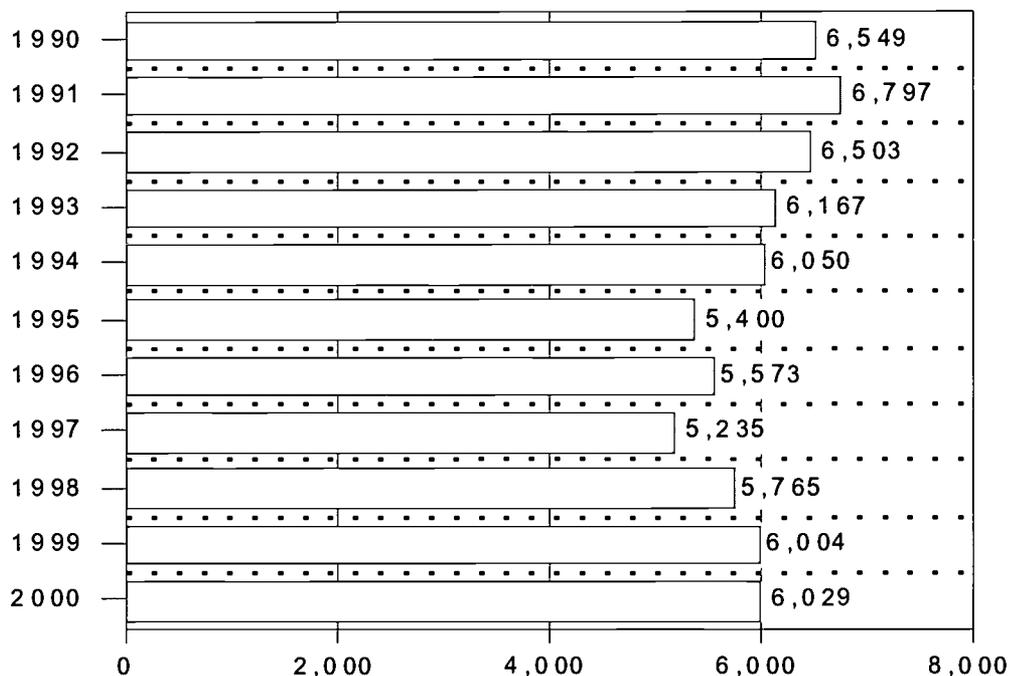

California Higher Education Systems Enrollment Fall 1985 - 1999

Enrollment is expected to increase again at community colleges in the coming years due to a slower than expected economic recovery, continued high unemployment, demands for retraining, and the projected increase in students "prepared to seek enrollment at all levels in the public higher education sector." Between 1998 and 2010 an increase of 714,753 (35.8%) students is projected. During this period the community college growth is expected to be 528,918 (35.9%). [Source: CPEC, "Moving California Ahead: An Executive Summary," June 2000]

In the June 2000 CPEC report, the current excess capacity of the state's community colleges is listed at 73,272 FTES. This is expected to be filled by 2002-03, after which the community colleges will need room for an additional 226,518 students by 2010. To meet the increased enrollment demand, either the state will have to fund the colleges at a higher level, or the colleges will have to seek additional outside funding and/or become more efficient and innovative in serving more students with less. CPEC projects the community college need at \$526.1 million a year over the next decade.

Ethnicity

Districtwide Despite falling from 36% in Fall 1994 to 30% in Fall 2000, African American students still comprise the largest single ethnic group among Peralta’s students. Asians are now the second largest group. In recent years, the proportion of Hispanics/Latinos has also increased steadily.

The ethnic mix of Peralta’s enrollment continues to undergo shifts reflecting the dynamic diversity of the East Bay population it serves. During the period 1994 to 2000, enrollment of Asians and Hispanics/Latinos increased considerably. Enrollment of African Americans was lower than the levels seen in the 1980s and early 1990s. As part of what is now a twenty-year trend, the proportion of white students continued to decline in this seven-year period. The most significant proportional increase was in the students who marked “Other” or who declined to state their ethnicity. They grew from 6% to 9% of the district population, a 50% proportional gain.

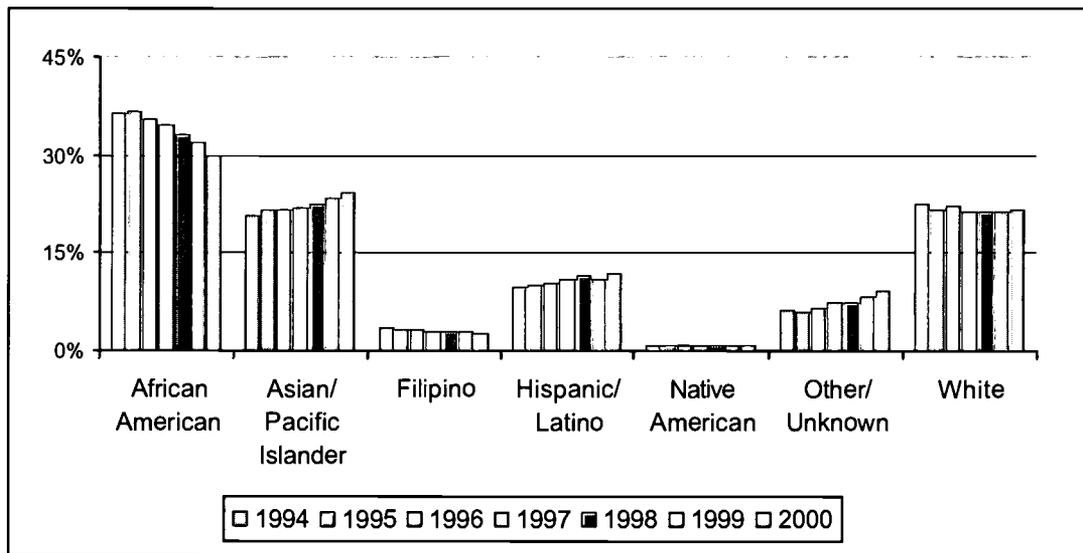

By College In Fall 2000 at the College of Alameda, Asian students were the largest ethnic group, followed by African Americans, whites and Hispanics/Latinos. At Laney College, Asians and African Americans were almost even with nearly twice the percentage of the next group, whites. Merritt College had proportionally more African Americans and fewer Asians. By contrast, at Vista, whites comprised the largest ethnic group, with proportionately fewer African Americans and Asians.

High rates of enrollment gain for Asians and Hispanics/Latinos were observed at Laney, Merritt and Vista. Enrollment by both African Americans and whites declined in absolute numbers and proportions at Merritt, with African Americans decreasing from 43% to 37%. At Vista the number of white students actually increased but the proportion of whites among all students fell.

Age

Districtwide Students enrolled at Peralta colleges are most likely to be in the traditional college-going age group, 19 to 24, or in their middle years, aged 35 to 54. Another one in six students was aged 25 to 29; about one in ten was 30 to 34 years of age. The youngest students—18 years and under—make up one in ten of all Peralta students, while those aged 55 and over make up an even smaller group.

Over the 1994-2000 period, there were clear shifts in enrollment patterns by age. Most notable was a decline in enrollment by those in the traditional college-going age group, 19 to 24. This loss was more than offset by increased enrollment among younger students—aged 18 and under—and older students—aged 35 and over. Students 55 and over doubled their percentage, from 3% to 6%. The percentage of students 35 and over grew from 28% to 34%. Students under 30 fell from 60% to 55%.

By College Compared to the district, the College of Alameda and Laney have proportionally more students aged 19 to 24 and fewer students aged 35 to 54. The reverse was true for Merritt. By comparison, Vista had proportionately fewer students 18 or under, but more aged 35 to 54 years.

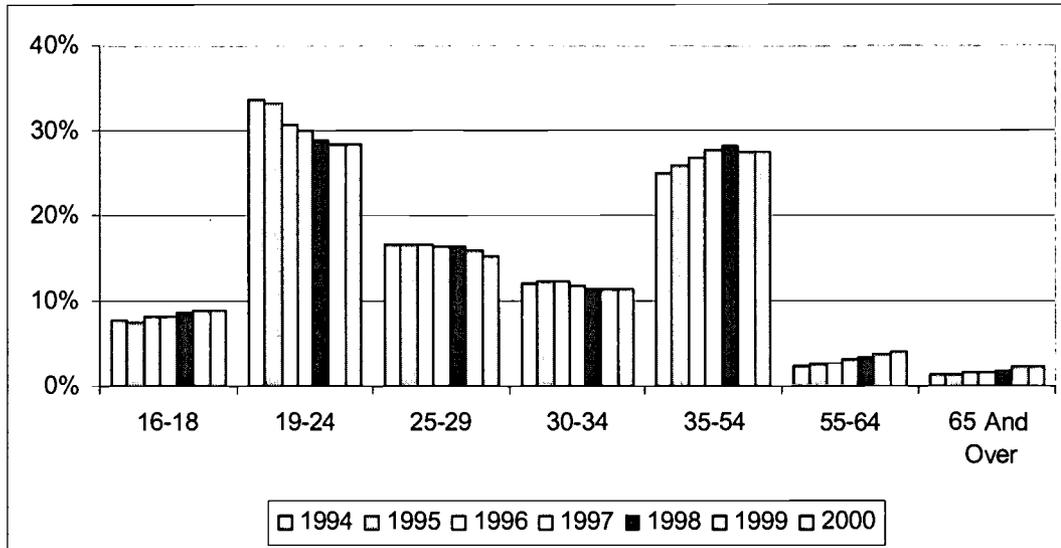

College of Alameda and Merritt had declines in enrollment of students aged 19 to 24, while Vista and Laney had increases. Laney and Merritt had increases in the proportions of younger students—aged 18 or younger—and Alameda, Laney and Merritt all had increases in older students—particularly those aged 55 to 64 years. In contrast, Vista’s enrollment of students aged 19 to 24 increased, while enrollments of both younger and older students declined as a proportion of the total. This reflects a continuing trend for Vista’s enrollment patterns toward becoming more like those of the other three colleges.

The number and percentage of students 55 and over at College of Alameda and Merritt more than doubled. The changes in age demographics at Peralta are in line with the low unemployment rate in the bay area during most of this period.

Gender

Districtwide Female students continue to be in the majority at all four of the Peralta colleges. Although enrollment of women increased by 2% (from 58% to 60%) over the period 1994-2000, the percentage of men decreased 3 points (from 42% to 39%), while students declining to state their gender rose from 0% to 1%. The number of non-reporting students rose from 18 in 1994 to 299 in 2000, an increase of more than 1500%. This increase all took place between 1998 and 2000 in two nearly equal yearly jumps.

By College In Fall 2000, Merritt College had the largest proportion of female students (67%). This is due to the program offerings, particularly in Child Development and Nursing. At Vista, the proportion of women students was almost as large. Enrollment by gender is more evenly distributed at College of Alameda and Laney.

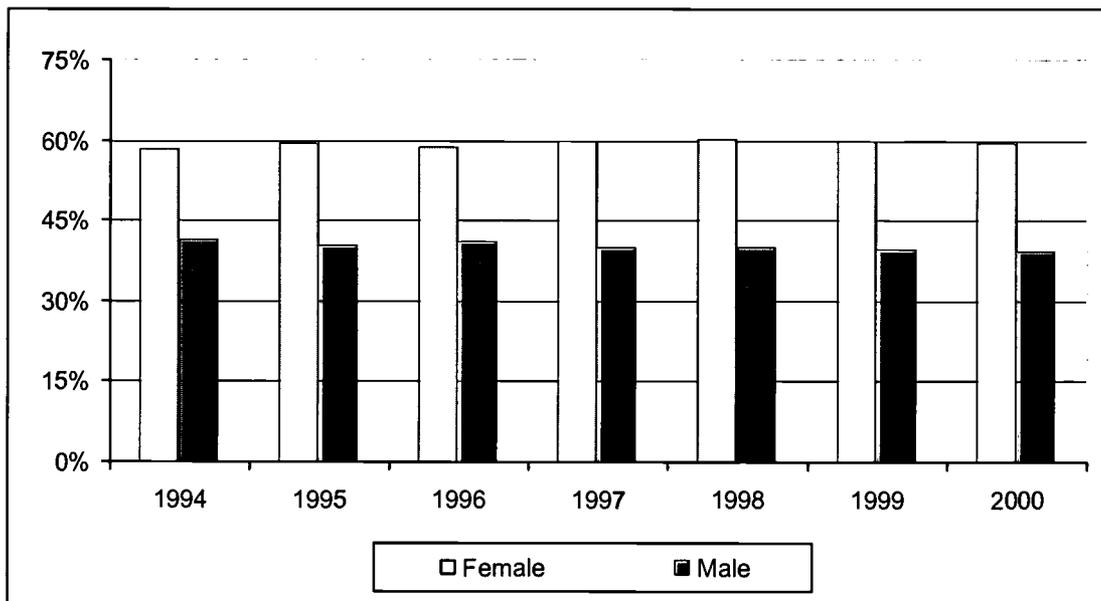

The proportion of females fluctuated slightly from year to year at all four colleges, showing a slight overall increase at Laney and Merritt, and a slight decline at Alameda and Vista. From 1994 to 2000 the increase in percentage of females at Laney and Merritt was 3%, the same as the decrease at Vista. The decline in males was 4% at Laney and Merritt.

Enrollment Status

Districtwide About four in ten of Peralta students enrolled were continuing. Two in ten were new students and another two in ten were new transfers. Returning students made up close to one in ten, while returning transfers comprised about 3%. The category “new students” includes all those registering at Peralta for the first time during a given term and is not limited to students who are defined as “recent high school leavers.”

Even as overall Peralta enrollment began to recover during the last few years of the 1990s, the proportions of continuing and new students fell slightly. These trends may reflect continued growth of employment opportunities for younger students. Many community college students are employed, often full-time. It is also not uncommon for students to stop out of college for a year or two. Some students attend a community college to upgrade their skills and may have achieved their educational goal after one or two semesters. Others enroll in vocational or technical courses and are employed prior to completing the program.

By College At College of Alameda, the pattern of enrollment status was similar to that districtwide. At Laney College, the proportion of continuing students was larger, but new transfers made up a smaller proportion of all students. Compared with the other colleges, Merritt had the lowest proportion of new students and the highest proportion of returning students. Vista College had the lowest proportion of continuing and high school enrolled students, as well as returning transfers, and by far the highest proportion of new transfers.

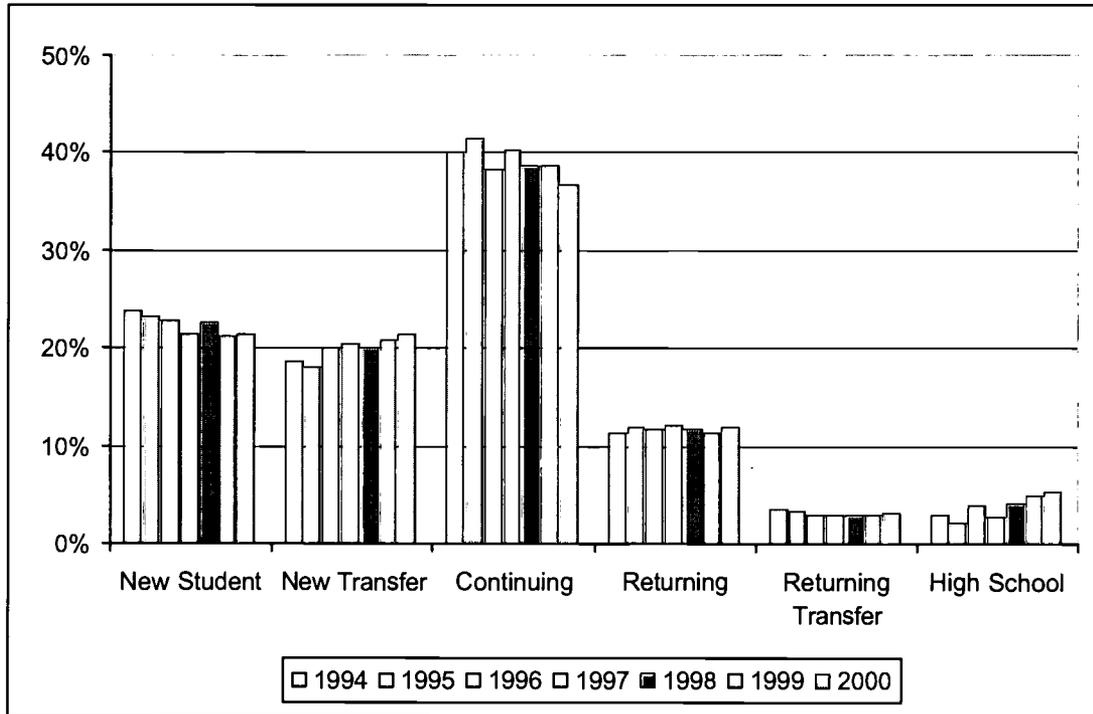

During the period 1994-2000, at College of Alameda, Merritt and Vista, the proportion of new students declined. At Laney, the proportion of new students remained steady. At Merritt and Laney, the proportion of transfers increased as a percentage of all students at College of Alameda, Laney and Vista continuing students declined; it increased slightly at Vista and remained flat at College of Alameda. New, while remaining the same at Merritt. The proportion of concurrently enrolled high school students more than doubled at Laney and Merritt, but decreased at Vista.

Enrollment Status by College: Fall 1994 and Fall 2000

Enrollment Status	Alameda		Laney		Merritt		Vista

- New Students: A first-time student enrolled in any college for the first time in any primary term (Fall/Spring) after High School.
- New Transfer: A student enrolled for the first time and who transferred from another institution of higher education.
- Returning Transfer: A student who previously attended a college, transferred to another college, and has now returned to the initial college.
- Returning: A student enrolled after an absence of one or more regular sessions without interim attendance at another college.
- Continuing: A student who is enrolled in the current session and who was enrolled in the previous regular session.
- High School: A special admit student currently enrolled in K-12.

Highest Level of Education

Districtwide Nearly two-thirds of students enrolled districtwide had completed high school—coming to Peralta with a diploma from a U.S. or foreign high school, or having completed a GED/high school proficiency certificate. More than one in five students had an Associate degree or higher. Only 8% had not completed a high school degree or its equivalent, while another 5% were concurrently enrolled in high school.

Between 1994 and 2000, there was a steady decline in number and percent of students who had completed a high school degree. In part this decline was offset by increases in students with foreign high school degrees and GED/high school proficiencies. This pattern was seen at all four of the Peralta colleges.

The increase in students with higher degrees was the other major trend observed, districtwide and at each of the four Peralta colleges. These enrollments have clearly recovered since a special fee—imposed on degree holders in Spring 1993 (from \$6 to \$50 per unit)—was ended in Spring 1996.

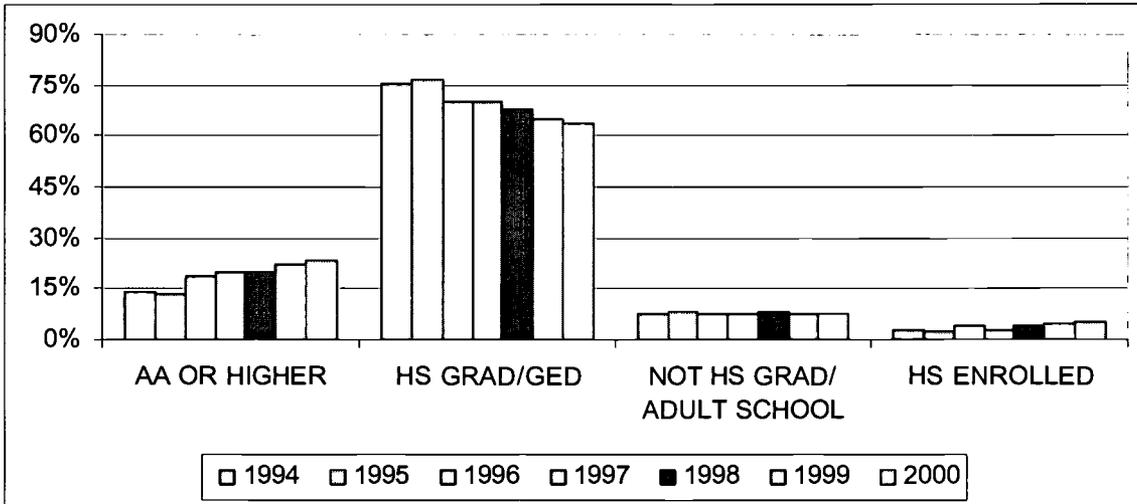

By College Compared with the district, a larger proportion of students at College of Alameda had completed a high school diploma; however, a smaller proportion had completed a higher degree. College of Alameda and Laney had higher proportions of students with a foreign high school diploma. At both Merritt and Vista, the proportions of students having completed higher degrees was above the district average.

Enrollments at Laney and Merritt showed an increase in the proportion of students concurrently enrolled in high school. At Vista, the proportion declined.

Student Load

Districtwide, 25% of Peralta students were enrolled full-time—12 units or more per semester—at the fall 2000 census date. At the colleges, the percentage of students enrolled full-time ranged from 20% at Laney to 14% at Vista. There was a significantly higher proportion of full-time students districtwide. This was caused by students enrolled on a part-time basis at more than one college with a combined unit total of 12 or more.

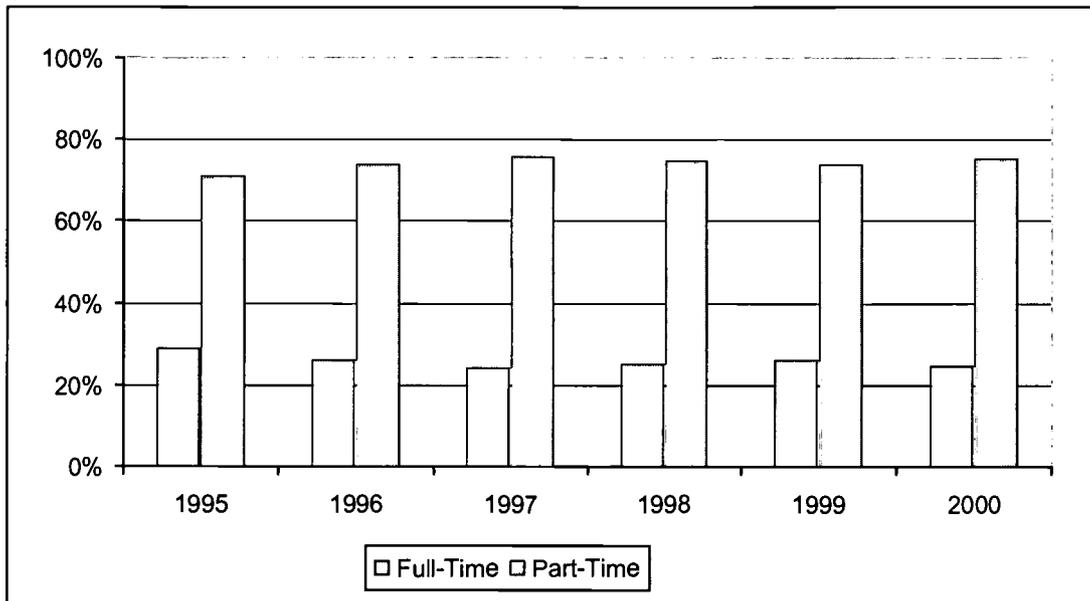

During the period 1994-2000, the largest drop in full-time enrollment was observed at College of Alameda. The percentage of students enrolling full-time fell at all Peralta colleges over the seven year period, but the number of full-time students increased slightly at Vista.

Day/Evening Students

Districtwide, nearly two-thirds (63%) of Peralta students were attending as day students in Fall 2000. The proportion of day students was similar for College of Alameda, Laney and Merritt, but much lower at Vista. A student enrolled in any daytime course during the week (Monday through Friday) is identified as a day student. Students enrolled only in the evening and/or on weekends are evening students. Since evening students are more likely to be part-time students, the headcount percentages do not reflect the proportion of day/evening course offerings.

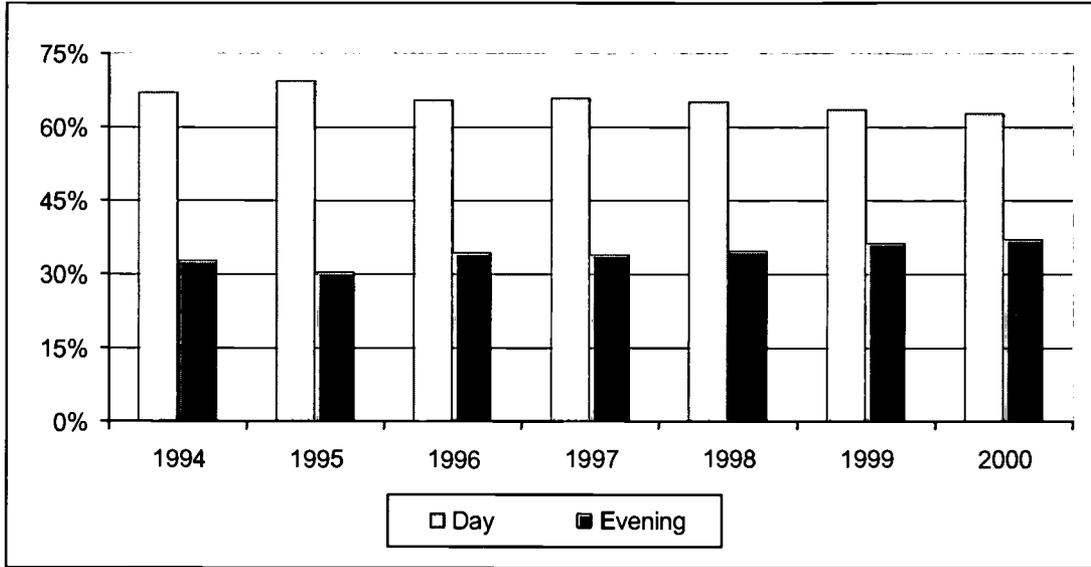

From 1994 to 2000, enrollment of day students trended downward at College of Alameda, Laney and Merritt; the trend toward increased enrollment of "night" students was strongest at Merritt. The increase was actually due to higher weekend enrollment. A trend toward larger proportions of day students over this period caused Vista's enrollment patterns to become more like those at the other three Peralta colleges.

Matriculation Status

The three main goals of the state-mandated matriculation process are to ensure that all students: (1) have access to a community college; (2) are provided with equitable opportunities for quality education; and (3) successfully achieve their educational objectives in the shortest possible time.

In order to measure the effectiveness of the matriculation process, community colleges are required to accurately track and report the number of students who receive services in the five main components of matriculation: (1) Admissions; (2) Orientation; (3) Assessment; (4) Counseling / Advising; and (5) Follow-up. The colleges and the District Matriculation Committee are responsible for continually reviewing the matriculation process and the number of students served to improve the scope and type of programs and services offered to increase student success.

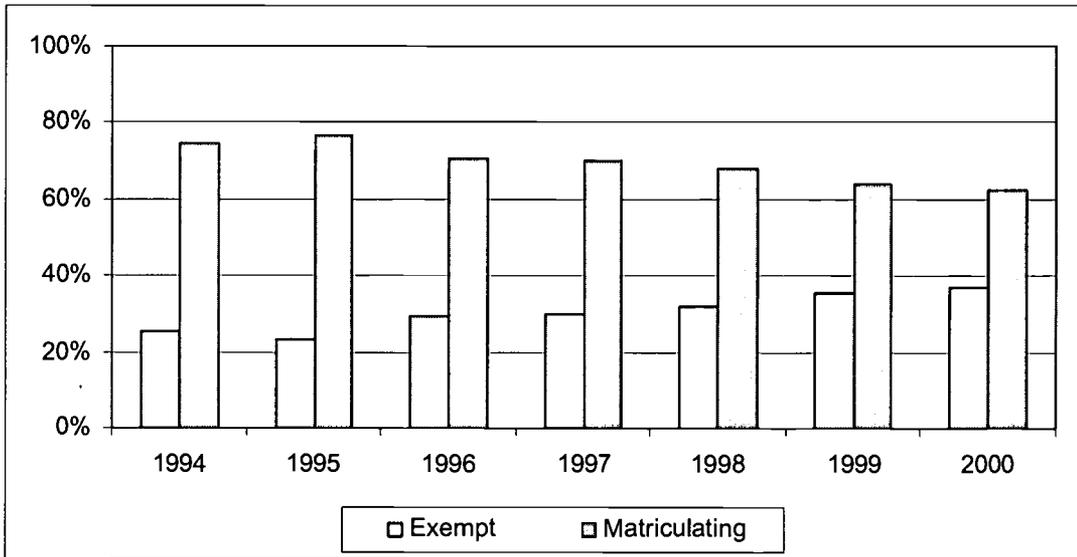

Districtwide In Fall 2000, nearly two-thirds (63%) of Peralta students were “matriculating”—as opposed to students who are “exempt” from requirements for matriculation (e.g., those already having bachelors degrees and enrolling for the purpose of educational enrichment). During 1994-95, the percentage of students matriculating increased from 75 to 77 percent, although districtwide enrollment declined. As enrollment improved during 1995-2000, the percent of matriculating students steadily dropped. In part, the drop in percent matriculating may be due to the removal in Spring 1996 of a differential fee that had been applied to students with higher degrees.

By College At College of Alameda and Laney, about seven in ten students were categorized as “matriculating” in Fall 2000. At Merritt and Vista, the proportion was closer to six in ten. During 1994-95, the proportion of students matriculating increased at each of the colleges, but most significantly at Vista—from 59 to 66 percent. After 1995, enrollment of matriculating students declined steadily at each of the four colleges. In Fall 2000, the percent of students planning to matriculate was well below the level in 1994, even at Vista.

Enrollment of Matriculating Students vs. Total Enrollment: Fall 1994 – 2000 Number (Unduplicated Count) and Percent Change

Matriculation Goal

Student-declared goals identify the primary purposes for which students are enrolled in community colleges. Reported are the declared goals of students after undergoing matriculation services. For those not receiving matriculation services, application goals are used. Care should be taken in interpretation since no distinctions are made between short- and long-term objectives, nor are all goals mutually exclusive.

Districtwide About one-fourth of Peralta's students had transfer to a four-year institution as their educational goal; another one-fifth were seeking to improve job skills. In Fall 2000, one in fourteen students enrolled to complete a degree or certificate program, and one in seven attended for the purpose of educational enrichment. Much smaller proportions had the goals of improving basic educational skills and completing high school credits. For 30% of Peralta students, the matriculation goal was recorded as "undecided" or "unknown."

Districtwide, there were declines in enrollment for the purpose of transfer and obtaining a degree or certificate during the period 1994-2000. In contrast, there were increased enrollments to improve job skills and for the purpose of educational enrichment. However, the most substantial increase was in the category of "Other" (i.e., undecided, unknown and completing high school credits).

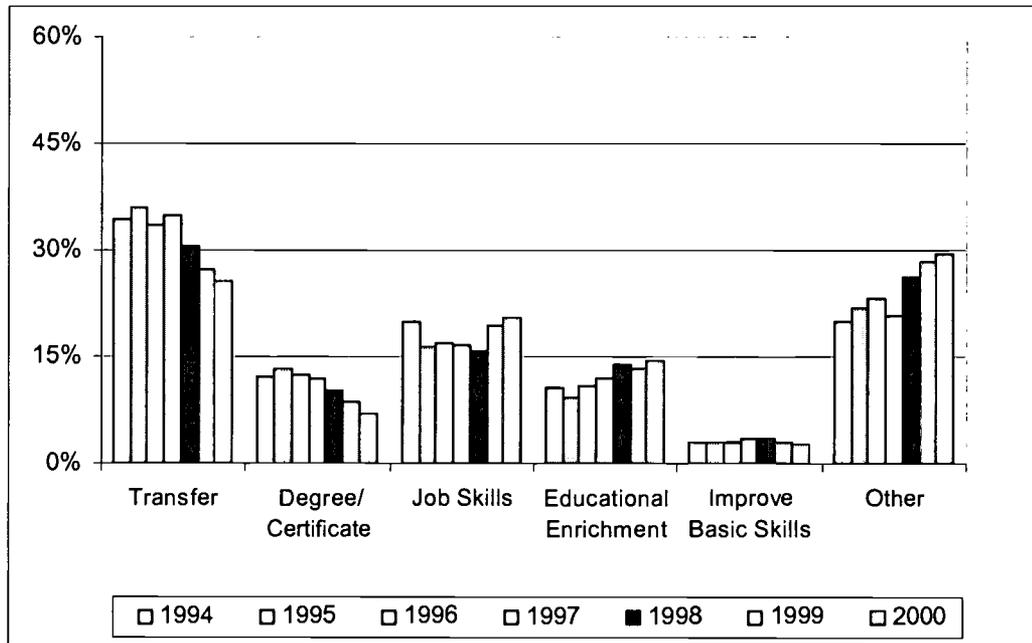

ByCollege At College of Alameda and Laney, patterns of enrollment by matriculation goal were very similar. Nearly one-half the students were either preparing for transfer or attending courses to improve job skills. Fewer than one in ten students were enrolled for the purpose of educational enrichment. At Merritt, a smaller proportion was preparing for transfer, but larger proportions sought educational enrichment. Among Vista's students the proportion with an "Undecided/Unknown" goal was lowest for all the Peralta colleges, although that category had the largest percentage increase, from 9% in 1994 to 24% in 2000. Half of the students at Vista were preparing for transfer or seeking to improve job skills, about the same as Laney and Alameda, while a smaller proportion was interested in completing a degree or certificate program. A sizeable group of students at Merritt and Vista enrolled for the purpose of educational enrichment.

At all four colleges, enrollment for the purpose of transfer and obtaining a degree or certificate decreased during the period 1994-2000, but increased for "Other". Merritt had a substantial increase in students enrolled for educational enrichment, from 8% to 23%. The number of students enrolled to complete high school credits more than doubled at each of the schools except College of Alameda, where it dropped from 193 to 154. Vista was the only college at which the percentage of students enrolled for educational enrichment declined. At each of the four colleges, there were increases in the number of students indicating a matriculation goal of "undecided" or "unknown" during the 1994-2000 period. The largest percentage increase was seen at Vista College and the smallest, at Merritt.

Primary Language

Districtwide Over recent years, the Peralta student population has grown with respect to ethnic and linguistic diversity as a result of demographic changes in its service area, as well as the increased enrollment of international students. In Fall 2000, one in six students enrolled at Peralta colleges spoke a primary language other than English. During the period 1994-2000, the number of students not speaking English as their primary language increased at a rate more than twice the overall districtwide enrollment—25% compared with 11%.

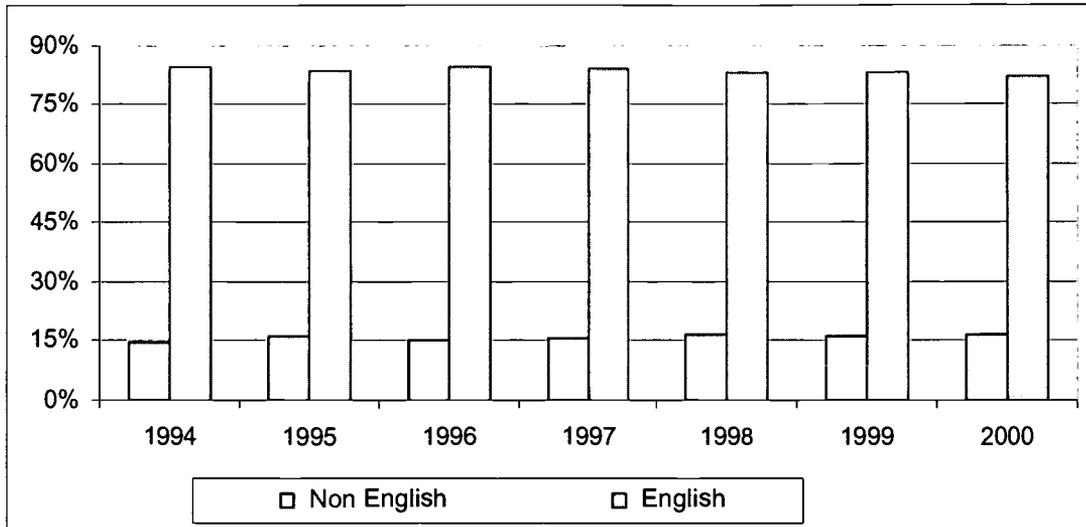

By College More than one in five students at College of Alameda and Laney College were non-native English speakers. Enrollments at Merritt and Vista reflected proportions closer to one in ten.

During the 1994-2000 period, increased enrollment of non-native English speakers was seen at all four Peralta colleges. However, the largest proportional increases took place at Merritt and Vista, bringing their enrollment patterns closer to those for College of Alameda and Laney. Significant increases in enrollment by non-native English speakers has potential ramifications for curriculum planning, as well as increasing the demand for various student services.

Seven Majors with Highest Enrollment

Districtwide The pattern of enrollment by major corresponds with declared matriculation goals of Peralta students. In Fall 2000, the seven majors with highest enrollment were Computer & Information Systems (CIS), Business Administration, Child Development, General Curriculum, Art, Nursing and English. This mix reflects continued strong student interest in training for immediate job and career prospects, as well as educational enrichment.

By College All four Peralta colleges continue to attract students pursuing study in the fields of CIS and Business. This reflects growth in job opportunities and trends toward wider application of electronic technology to communications and industry. At the College of Alameda and Laney, the popularity of CIS and business-related majors corresponds with the larger proportions of students preparing for transfer and working toward degrees and certificates. More than for the other colleges, Vista's list of top majors appears to reflect student interest in preparing for transfer to four-year institutions.

Particularly among female students, the attraction of careers in specialized fields with projected growth in job demand is seen in high enrollments for the Child Development and Nursing programs. Although numbers have been declining since 1994, the Nursing program at Merritt College continues to be popular. It is interesting to note that Nursing is among the top seven majors at College of Alameda and Laney even though the program is only offered at Merritt. This apparent anomaly is due to the high percentage of students who attend more than one of the Peralta colleges during a given term in order to attain their educational goal.

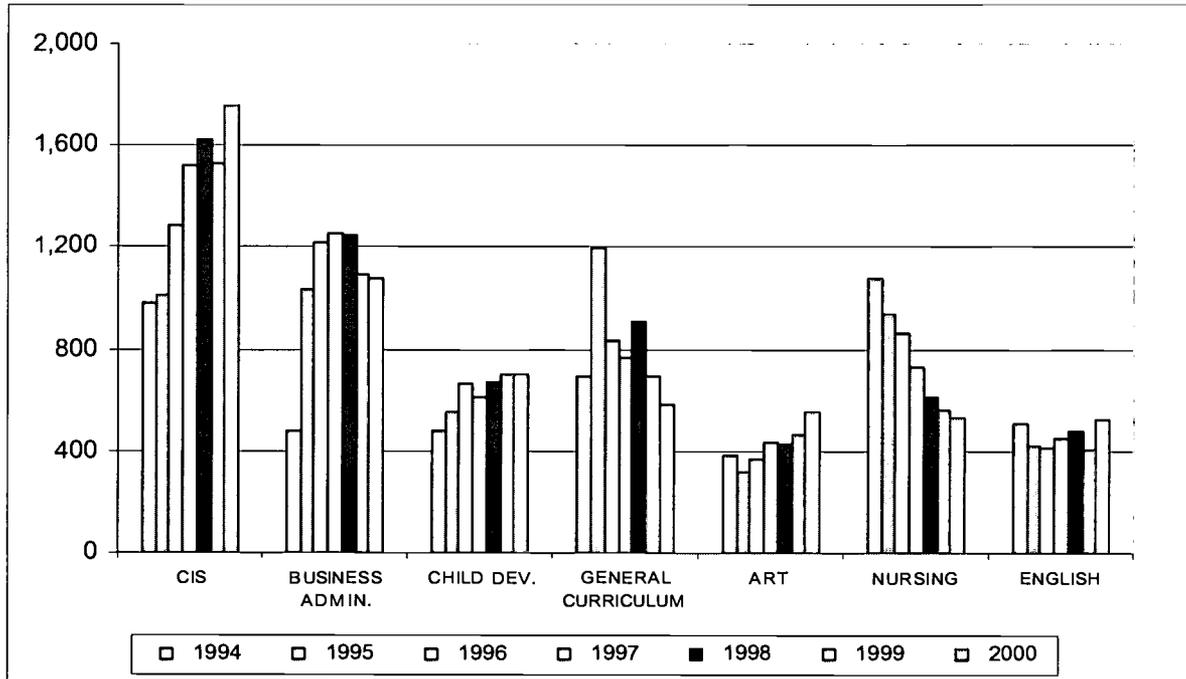

CIS did not become the number one major at Peralta until 1996. Nursing was first in 1994 and General Curriculum in 1995.

Major Area

“Undecided” Major A large proportion of students at the Peralta colleges as well as other community colleges are undecided about a major field of study. Statewide, one in six community college students indicates “undecided” when asked about objectives. They tend to enroll in a broad range of courses to fulfill general education requirements and explore different fields. Progress has been made through the matriculation process to assist students in developing an educational plan and identifying a major.

**Percent of Students with “Undecided” Major
Districtwide and by College: Fall 1994 and 2000**

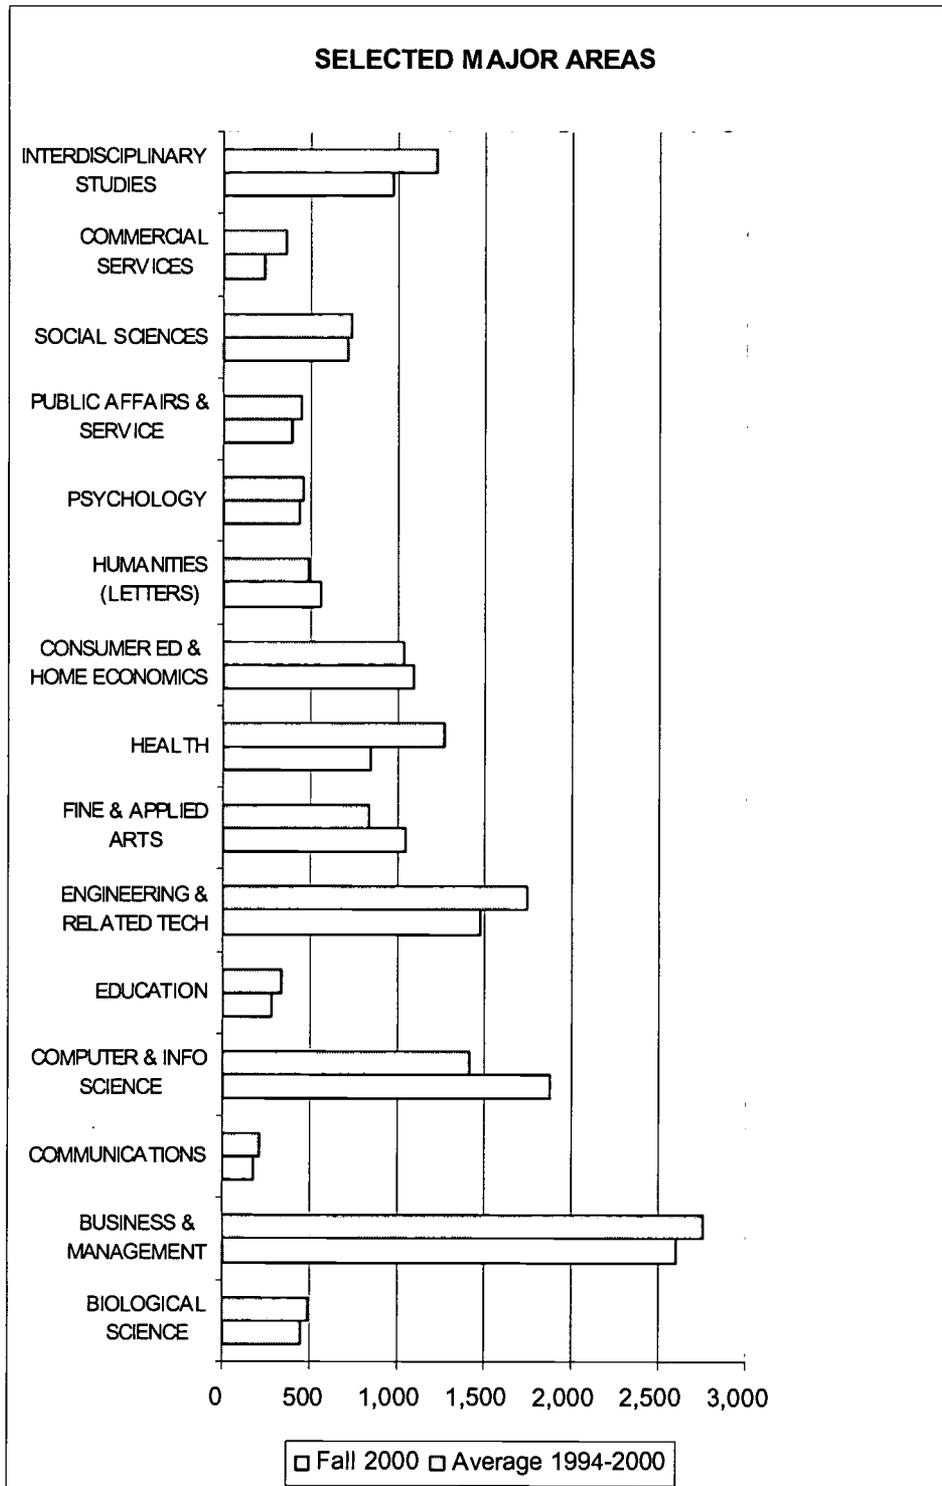

Year	Alameda	Laney	Merritt	Vista	District
1994	33%	29%	24%	18%	28%
2000	20%	21%	16%	22%	20%

Major Area Patterns of enrollment by major area of study correspond with those in students’ matriculation goals. Average enrollments were highest in the area of Business & Management. Consistently high enrollments were also seen in six other areas: Computer & Information Science (CIS); Engineering & Related Technologies; Consumer Education & Home Economics; Interdisciplinary Studies; Health; and Fine & Applied Arts.

Comparing Fall 2000 with seven-year averages, upward trends in enrollment were seen in three of the major areas with highest enrollment: CIS; Fine & Applied Arts; and Consumer Education & Home Economics (which includes programs such as Culinary Arts and Child Development). These trends were repeated across enrollments at the four colleges. At Merritt College, enrollment growth was largest in Consumer Education/Home Economics, due to expansion in numbers of Child Development majors.

Four areas of study with previously high enrollments began to show declines in Fall 2000. These were Business & Management, Engineering & Related Technologies, Health and Interdisciplinary Studies. This pattern was observed for the district as a whole, with a few exceptions. Laney was the only Peralta college recording a trend toward enrollment growth in Business & Management. At Vista College, enrollment in Engineering & Related Technologies increased in Fall 2000.

Disabled Students Program and Services (DSPS)

The Peralta colleges served more than 1,000 students with disabilities in the fall 2000 term. This is about four percent of the total student population. The number of students receiving DSPS services has remained relatively steady for the last seven years with a high of 1,122 in 1999 and a low of 971 in 1994.

In the fall of 2000, College of Alameda served 351 students with disabilities. More than half of those were learning related: learning disabled, 135; developmentally delayed learner, 50. Laney College served 325 students in their DSPS office. Of those, 120 (37%) were considered learning disabled. Thirty-four percent of Merritt's 212 students with disabilities were learning disabled. On the other hand, in the fall 2000 term the category with the highest percentage of Vista's 241 disabled students was "mobility impaired" (40%).

Extended Opportunities Programs and Services (EOPS)

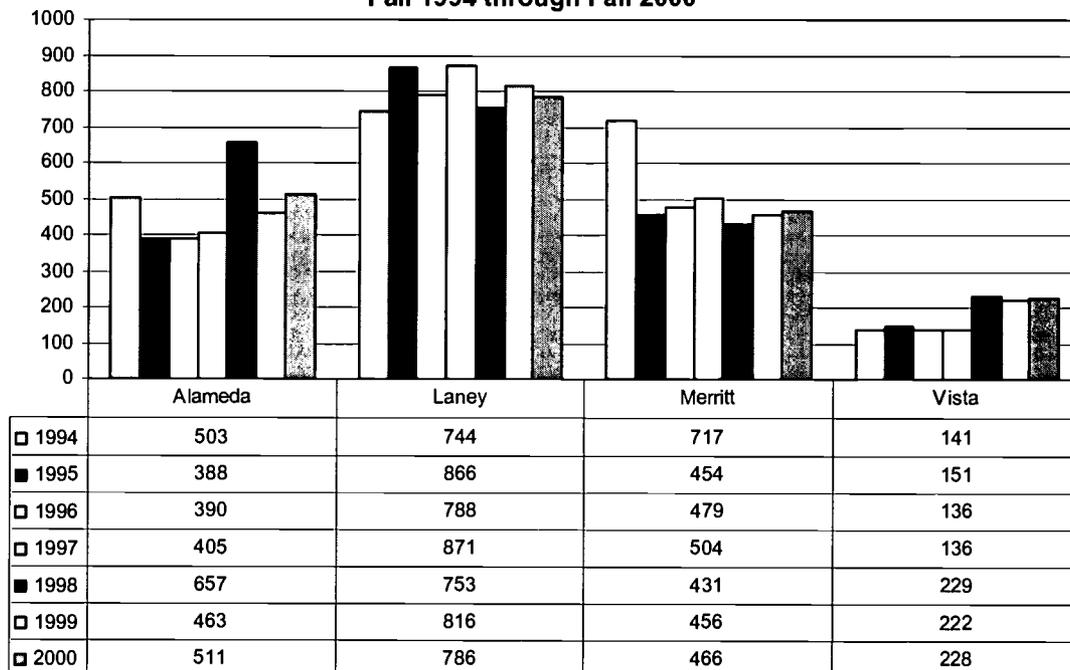

The Extended Opportunity Program and Services (EOPS) is a state-funded, special enrichment program for students who historically have been under-represented in higher education. The goal of the program is to increase the opportunity of high-risk, low-income, culturally or linguistically disadvantaged students to enter and succeed in college. At least ninety percent of EOPS students must be enrolled full-time to maintain eligibility. A college may serve up to ten percent of part-time students—enrolled in 9 to 11.5 units.

Students are eligible for the program if they are California residents, are educationally disadvantaged, have fewer than 70 units of degree-applicable college credits, qualify to receive a Board of Governor’s fee waiver (BOGW). They must also meet one or more of the following criteria: (1) are not a high school graduate, have not passed the California High School Proficiency Examination, or obtained the GED; (2) do not qualify for the minimum level English or mathematics coursework required for an associate degree; (3) were previously enrolled in remedial education courses; (4) are the first in their family to attend college; (5) are a foreign-born resident with language difficulty; (6) meet other criteria considered relevant.

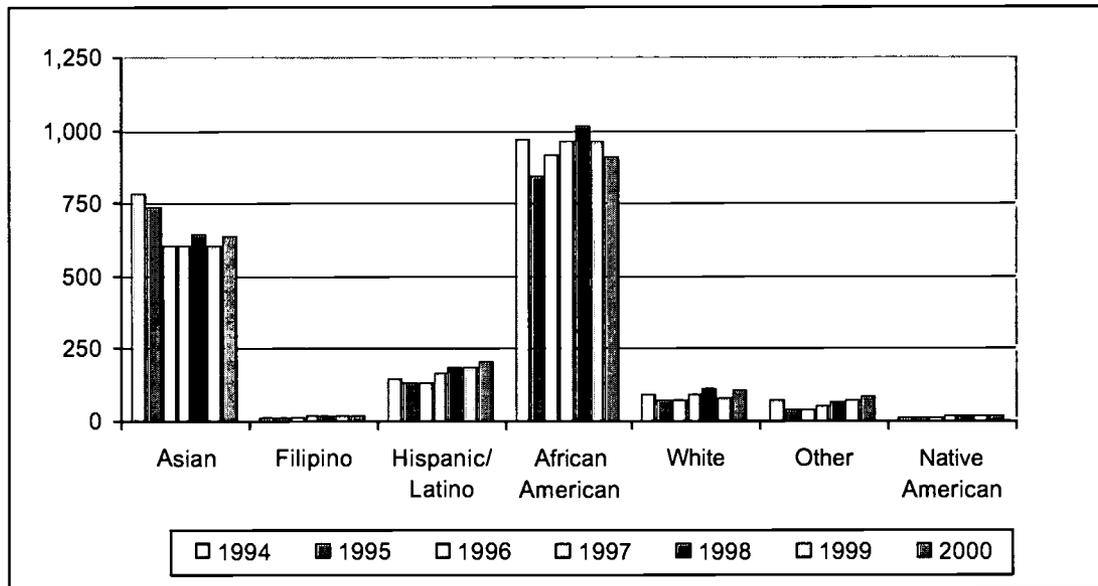

In the fall of 2000, Peralta served just under 2,000 students in EOPS, or about 7% of the total student population. During the period 1994 through 2000, the number of EOPS students increased at all colleges except Merritt, which showed a 35% decrease. EOPS enrollment typically comprises 7% to 8% of the total student population. In fall 2000, EOPS students made up 8% of enrollment at Alameda; 6% at Laney, 7% at Merritt, and 5% at Vista.

Compared with district-wide enrollment patterns by ethnicity, students receiving EOPS services at all four colleges were disproportionately African American. At College of Alameda and Laney, EOPS students were disproportionately Asian. At Vista College, the proportion of Hispanic/Latino students among EOPS participants was larger than that for the College overall.

Financial Aid

The purpose of financial aid is to provide students who have limited resources the funding needed to support completion of their educational goals. Financial aid awards come in a number of forms including grants (gift aid), low interest loans, work-study and scholarships. Another form of aid available to California residents is the Board of Governor's Enrollment Fee Waiver (BOGW). The BOGW fee waiver pays all enrollment fees for the academic year in which the student is eligible.

In 1999-2000, compared with overall enrollment by ethnicity, at all four colleges a higher proportion of financial aid recipients were African American. Districtwide, 44% of financial aid recipients were African American. At College of Alameda, Laney and Merritt, Asians comprised a higher percentage of financial aid recipients than their percentage in the college overall.

Number of Students Receiving Financial Aid (Awards or Fee Waivers)

	Alameda	Laney	Merritt	Vista	District
95-96	2,606	4,929	2,372	1,271	10,541
96-97	3,403	6,174	2,898	1,543	10,583
97-98	3,366	6,588	3,067	1,792	11,088
98-99	3,626	6,184	2,905	1,878	10,790
99-00	3,375	5,545	2,533	1,677	9,536

Unduplicated headcount

Financial Aid Awards In 1999-00 at Peralta, more than 4,500 financial aid awards were given to students. Alameda and Laney had the largest number of students receiving financial aid awards. Merritt had the smallest. College of Alameda, Laney, and Merritt saw a significant decrease in the number of awards—30% at Merritt, 16% at Laney, and 8% at Alameda. The number of financial aid awards at Vista College increased 82%.

Pell grants comprised the largest block of awards granted at all colleges—49% at Alameda, 57% at Laney, 42% at Merritt, and 58% at Vista. Federal Supplemental Educational Opportunity Grants (SEOG) comprised the second largest type of award given at all colleges.

BOGW Fee Waivers In 1999-00, the Peralta colleges served more than 10,000 students with Board of Governor's Grants (BOGW) fee waivers—about 38% of the total student population. College of Alameda and Laney had the highest proportion of students receiving fee waivers (38% each); Merritt had the lowest proportion (25%). One-third of Vista students benefited from BOGW waivers. Comparing 1995-96 and 1999-00, the proportion of students receiving BOGW fee waivers declined at all four of the Peralta colleges.

In 1999-00 at all four colleges, the largest proportion of BOGW fee waivers was made on the basis of proven financial need or actual income level.

Successful Course Completion

Successful course completion is a key indicator of student academic performance. Under the Partnership For Excellence (PFE), the Peralta Community College District is striving to contribute its share toward meeting statewide goals for improving rates of successful course completion. In this document course completion or completion rates always refer to successful course completion.

The rate of successful course completion is computed as the sum of course enrollments receiving an official grade of A, B, C or Credit (CR) divided by attempted course enrollments. Attempted course enrollments is the sum of students receiving a grade of A, B, C, Credit (CR), D, No Credit (NC), F, Incomplete (I), or Withdrawal (W and MW).

Completion rates have dropped significantly between 1994 and 2000 for all Peralta colleges except Merritt. Merritt began the period with a rate of 64% and ended it with a rate of 71%. Alameda, Laney and Vista dropped close to five percentage points each between 1994 and 2000. The overall rate declined from 71% to 66% at the College of Alameda, from 68% to 63% at Laney, and from 66% to 61% at Vista.

In fall of 2000, course completion rates were highest for Asians, ranging from 68% at Vista to 76% at Merritt, and whites, ranging from 67% at Vista to 79% at Merritt. Hispanic/Latino students had rates of successful course completion from 56% at Vista to 72% at Merritt, while African Americans had the lowest rates ranging from 52% at Vista to 65% at Merritt.

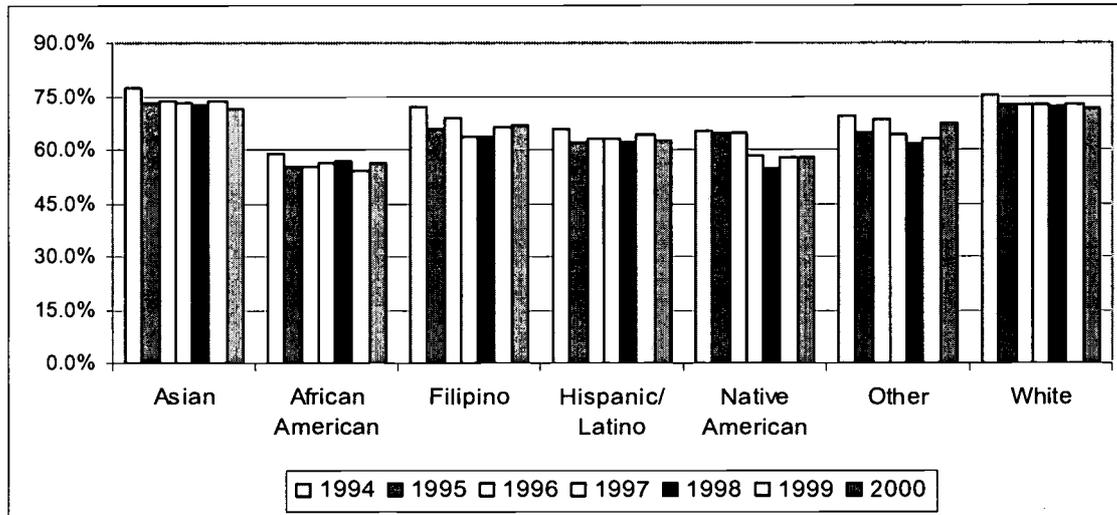

Y Axis truncated - scale starts at 40%

Student Success Rate

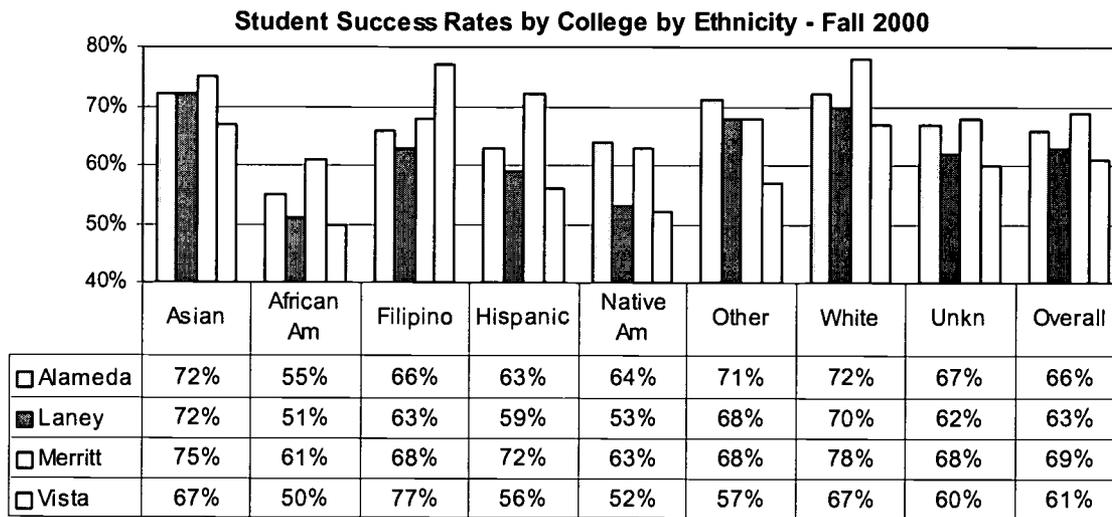

The student success rate, rate of successful units completed, like successful course completions, is a measure of academic performance. Unlike successful course completions in which all courses count equally, in successful units completed courses with a higher load count more than those with a lesser load. For example, a four-unit course counts twice as much as a two-unit course.

The success rate is computed as the sum of units for course enrollments receiving an official grade of A, B, C, or Credit (CR) divided by units for attempted course enrollments. Units for attempted course enrollments are those for courses where the student received a grade of A, B, C, Credit (CR), D, No Credit (NC), F, Incomplete (I), or Withdrawal (W and MW).

Since 1994, overall success rates and course completion rates have followed each other closely at all the colleges. Success rates were identical to course completion rates in fall 2000 at all colleges except Merritt, where the success rate was several points lower.

The overall success rate has dropped four to five points from fall of 1994 to fall of 2000 at Alameda (71% in 1994 to 66% in 2000), Laney (67% to 63%), and Vista (66% to 61%). Merritt College increased its success rate from 66% in 1994 to 69% in 2000.

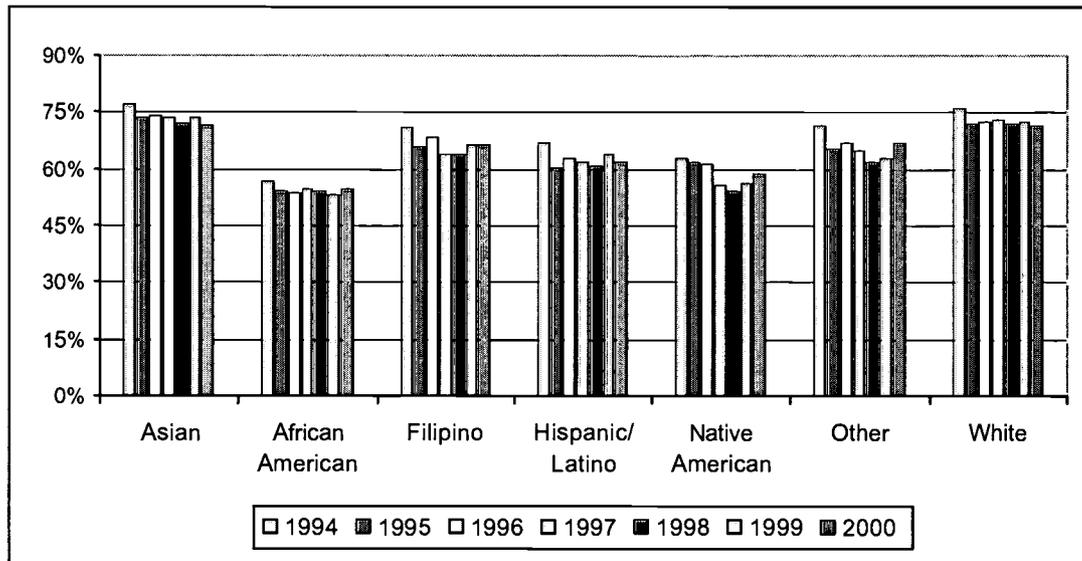

In fall of 2000, Vista had the lowest success rates in all ethnic-race categories except Filipino. Filipino students had a strikingly high 77% rate at Vista. African American students at Vista had the lowest success rate of any category or college, 50%. The highest overall success rates were experienced by Asian students—67% at Vista to 75% at Merritt—and whites—67% at Vista to 78% at Merritt. Hispanic students had the most disparity in the rates between the colleges, with a 16-point difference between Vista (56%) and Merritt (72%).

Student Retention

The student retention rate is calculated as the number of students who complete at least one class with a grade other than "W" over the total number of students enrolled in at least one class. A high retention rate may reflect, among other factors, a high level of student satisfaction with the college environment, services, programs, faculty and staff.

Between 1994 and 2000, overall rates of student retention declined at all four Peralta colleges; rates decreased the least at Merritt (78% to 75%) and the most at Laney (78% to 70%). Since the retention rate and drop rate are reciprocal, it can be observed that drop rates increased the most at Laney College. In fall 2000, students enrolled at Merritt College had the highest overall rate of retention (75%); the lowest rate was for Vista students (69%). In 2000, both retention and successful course completion rates were highest at Merritt College and College of Alameda. Both rates were lower at Laney, and the lowest at Vista.

In fall of 2000, student retention rates were highest for whites (ranging from 71% at Vista to 79% Merritt), Hispanics (69% at Vista to 76% at Merritt), and Asians (71% at Vista to 75% at Alameda). African Americans had the lowest rates (ranging from 63% at Laney to 72% at Merritt).

Between the fall of 1994 and the fall of 2000, student retention rates declined for nearly all race-ethnic groups at all four Peralta colleges. However, for African American students, rates fell below 70% in the majority of years. African American students showed the largest declines in retention at Laney, from 77% in 1994 to 63% in 2000, and at Vista, from 75% in 1994 to 65% in 2000. Native American students also experienced large declines at Laney and Vista between 1994 and 2000.

Student Persistence

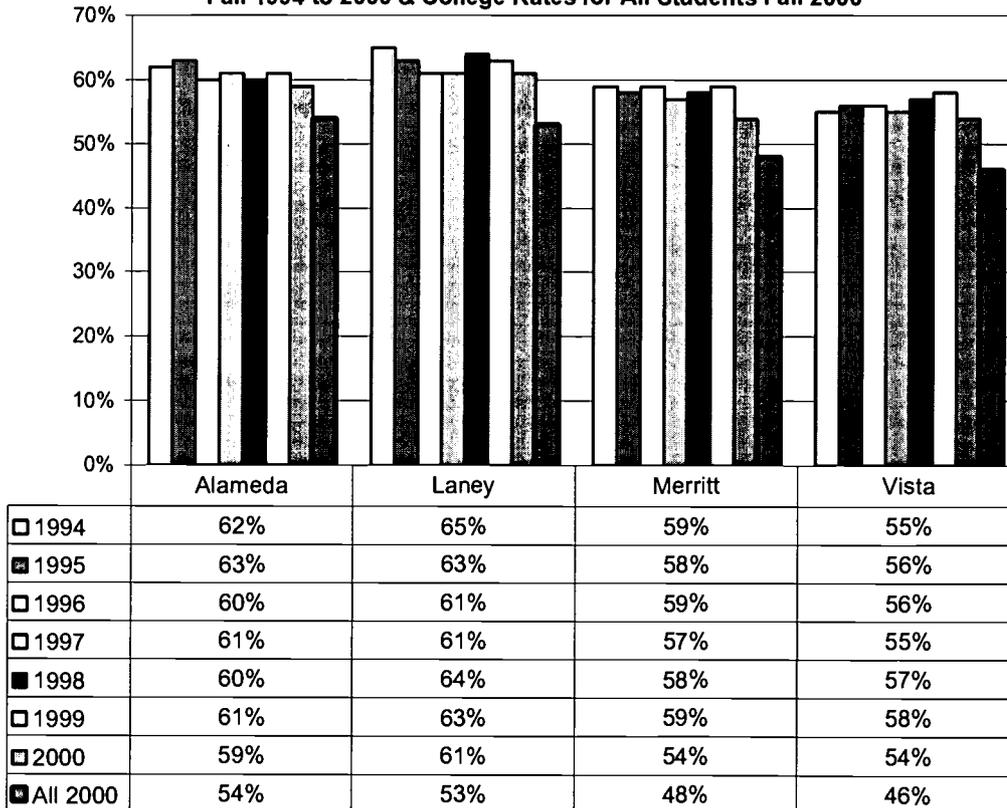

Persistence is a measure of endurance by students from term-to-term. It is based on continued enrollment from the fall term to the spring term of an academic year. The persistence rate is computed as the unduplicated headcount enrollment of those persisting from fall to spring, divided by the unduplicated headcount enrollment of the fall term.

Rates at College of Alameda, Laney and Merritt, stayed between 50% and 60%, but declined three to seven points from 1994 through 2000. At Vista College rates fluctuated between 46% and 51%. Persistence rates of matriculating students were consistently higher than the college overall. Like the overall college rates, the matriculating student rates have declined from 1994 to 2000. At Merritt persistence went from 59% in 1994 to 54% in 2000. For Alameda and Laney matriculating student persistence was near or above 60%. Vista's matriculating student rate was at the same level in 1994 (55%) as it was in 2000 (54%). With few exceptions, rates of every ethnic group declined from 1994 to 2000.

Continuing students have the highest rates at all colleges, ranging from 60% at Vista to 68% at Laney for fall of 2000. New students maintained nearly the same rates as the overall college at Alameda and Laney, but were two points lower at Vista, and five points lower at Merritt.

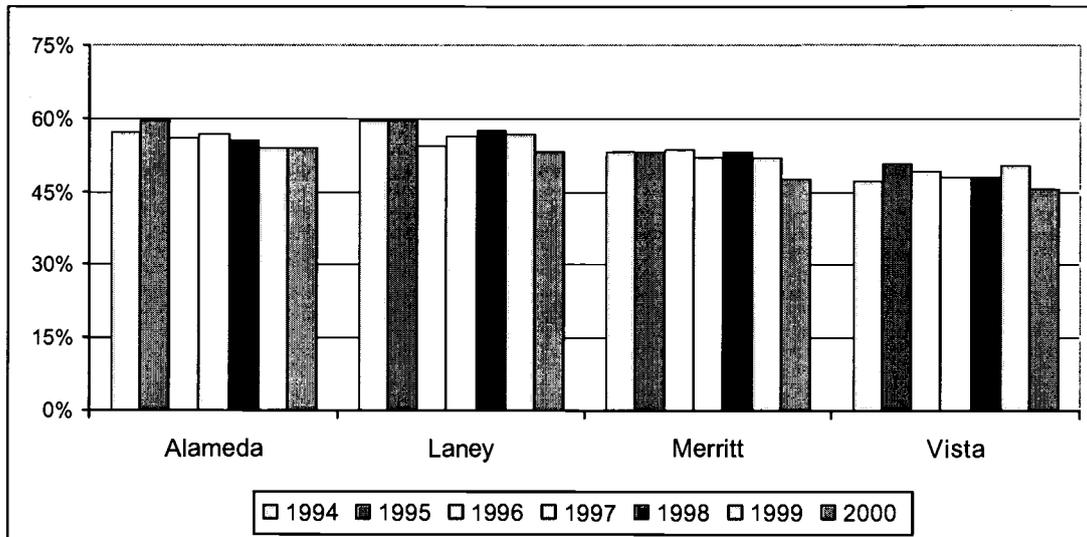

Persistence Rates of Matriculating Students
Fall 1994 to 2000 & College Rates for All Students Fall 2000

Persistence is the percentage of fall students enrolled at census date, who enrolled in any course in the following spring term.

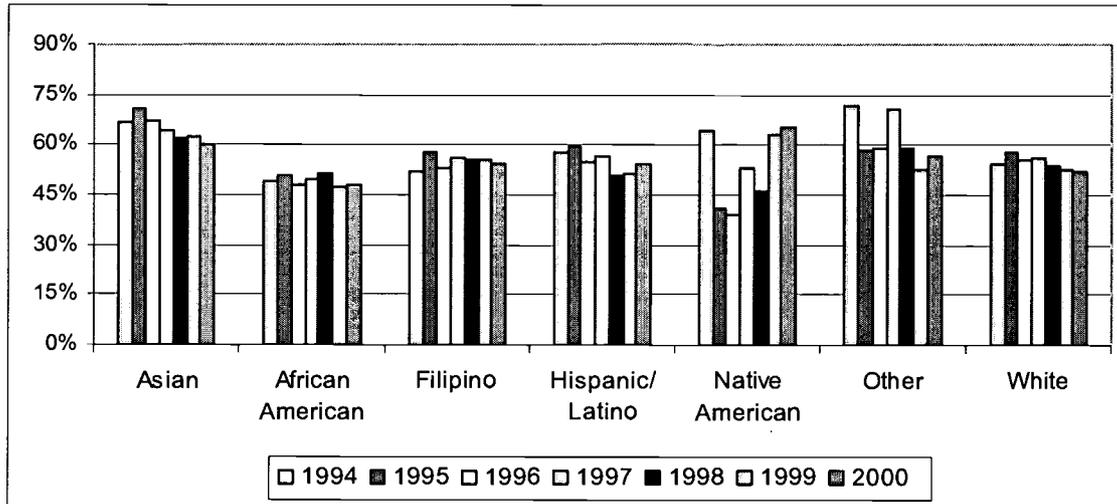

Peralta District Persistence Rate by College Fall 1994 - Fall 2000

Degree and Certificate Awards

For all community colleges in California, the overall number of degrees and certificates increased by 6.1% in 1998-99. Associate degrees grew by 5.0% to a total of 64,030, while the number of certificates grew by 8.9%, to 27,660. [Chancellor's Office, California Community Colleges, "Report on Transfers and Degrees and Certificates Awarded: 1998-99," Feb. 2000]

At Peralta, during the 1990s, the total number of degree and certificate awards increased in eight out of ten years—declining in 1992-93 and 1997-98. Through this period, AA/AS degrees comprised the largest share of all awards (64%).

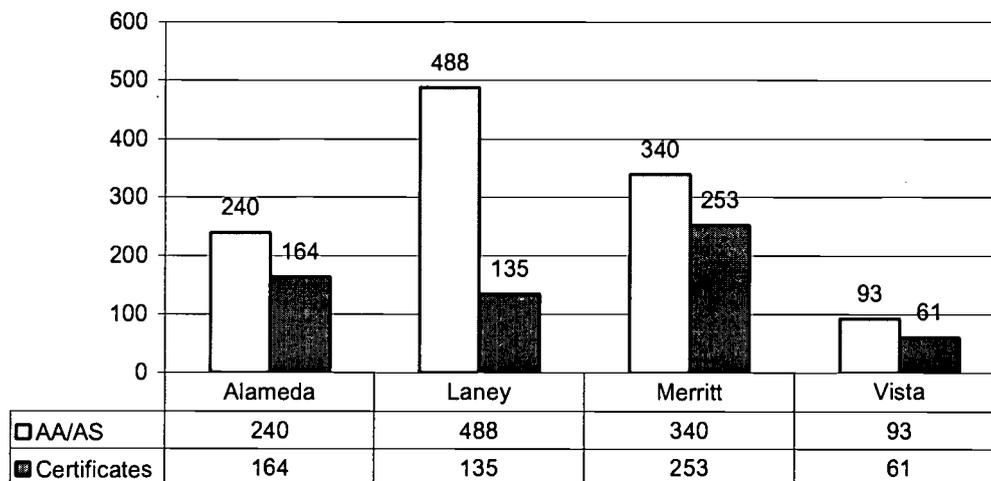

Although there have been fluctuations, the number of Associate degrees and certificates awarded has increased significantly at the Peralta Colleges since 1990. Associate degrees doubled district-wide and tripled at Laney College. Associate degrees in General Curriculum, Social Science and Liberal Arts account for most of the increases at all four colleges. The use of an automated degree audit program contributed significantly to the increases. Merritt and Vista saw increases in Associate degrees of more than 80%—Alameda increased 58%.

The number of certificates awarded at Vista College quadrupled. A rise in the number of American Sign Language certificates awarded accounts for most of this increase. Merritt more than doubled the number of certificates awarded over the decade. This was due, in part, to an increase in Community Social Services certificates. An added factor is that community colleges can now take credit for certificates of achievement (CA), which require less than 18 units. Merritt awards a number of certificates of achievement in Certified Nurse Assistant/Home Health Aide. Increases in the number of certificates awarded were also seen at Alameda (45%) and Laney (13%).

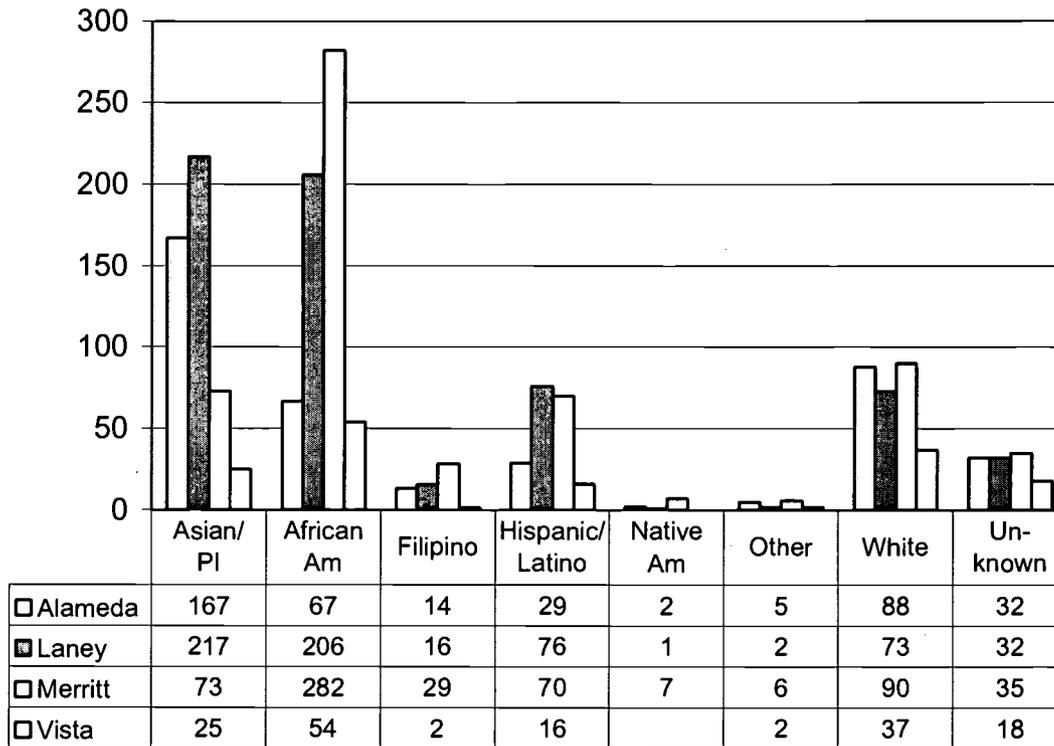

Increase in Associate Degrees & Certificates Over 10-Year Period 1990-91 to 1999-00

Transfers to Four-Year Institutions

Recognizing the transfer function as an important facet of educational opportunity, the California Community Colleges' *Partnership for Excellence Program (PFE)*, in consultation with the California State University and University of California systems, established aggressive community college transfer goals. The goals are supported by initiatives to improve course articulation, increase joint participation in transfer centers, intensify outreach activities, expand evaluation procedures, and offer more part-time options for UC transfer students. [California Postsecondary Education Commission (CPEC), "New Community College Transfer Students at California Public Universities," Factsheet 01-2, January, 2001] The community colleges are responsible for providing the curriculum and services students need to become transfer-ready. The four-year institutions are responsible for articulating clear entrance expectations. Other issues come into play, including admission policies at the receiving institutions, which have a significant impact on the actual number of students who are able to transfer.

Largely due to the Program for Adult College Education (PACE), Vista has shown dramatic increases in transfers since 1990-91 to both CSU, up 72%, and UC, up 55%. Despite increases in prior years, the number of transfers to CSU since 1995-96 has declined nearly 5% for Alameda and 3% for Merritt. In 1999-00 Laney saw an increase in transfers to CSU of nearly 9% from the prior year. Alameda transfers to UC, while showing an increase in one out of the last 6 years, remained relatively flat. In 1999-00 Laney increased from the previous year, but generally declined over the previous four years. Merritt College has experienced a general decline in the number of transfers to UC over the previous four years.

In 1999-00 the Peralta colleges as a whole sent more students to CSU Hayward than any other 4-year institution. While CSU Hayward was the top transfer institution for Alameda, Merritt and Vista, Laney sent more students to CSU San Francisco.

Grade Distribution

In the fall of 2000, an "A" grade was the most frequently awarded passing grade (31%) at all the Peralta colleges. At the College of Alameda and Merritt College, "A" grades made up fully one-third of all grades awarded. Over the period 1994 to 2000, the percentage of "A" grades increased at all colleges but Laney, where the percentage of "A" grades declined from 36% in fall 1994 to 30% in the fall of 2000.

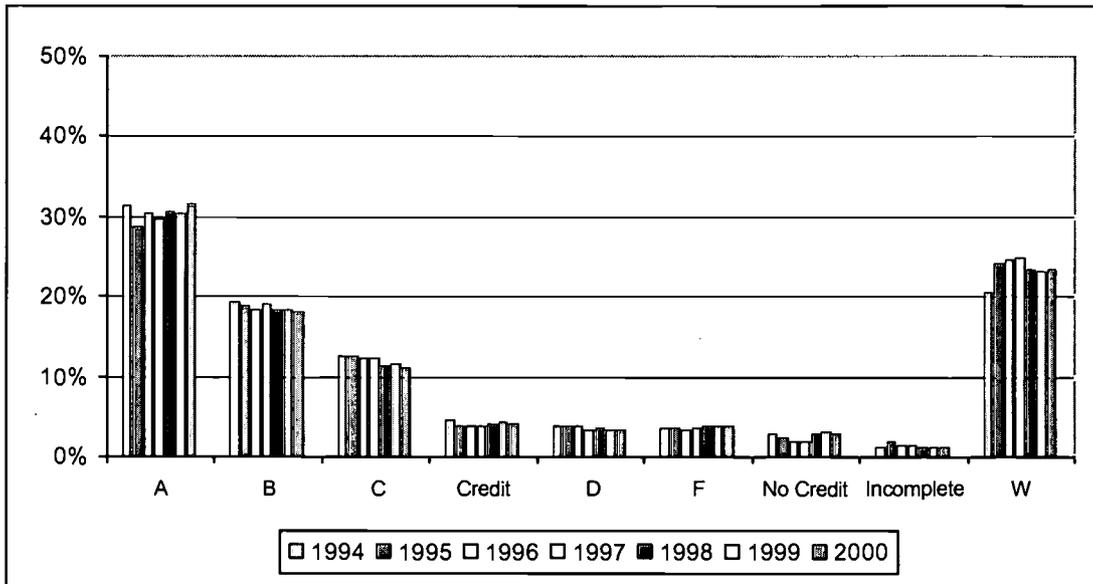

At the College of Alameda, Laney and Vista the proportion of passing grades dropped between 1994 and 2000. At Merritt College, the proportion of passing grades increased from 65% to 70% over the seven-year period.

Between 1994 and 2000, the proportion of course withdrawals increased at Alameda, Laney and Vista, with the largest numeric increase at Laney where "W" grades made up more than a quarter of all grades awarded. Merritt College awarded slightly fewer "W" grades in fall 2000 than in fall 1994.

Vocational Programs

As the needs of the economy grow and change, becoming more computer and technologically oriented, vocational training needs will continue to require greater attention and flexibility in curriculum planning. Clearly, many students continue to be attracted to Peralta for vocational training. Students who enrolled in at least one vocational course represent a substantial portion of the student body at all four of the Peralta colleges: 51% at Merritt, 43% at College of Alameda, 37% at Vista and 36% at Laney.

The question is how best to tailor programs to stay abreast of current needs. Based on projections by the U.S. Bureau of Labor and input from businesses that hire community college graduates, one of the greatest areas of educational need is for vocational training providing certification for entry-level employment in high tech firms. [AACC, *Headline News*, 1999.]

In its "Faces of the Future" survey, the American Association of Community Colleges (AACC) found that among credit students, 60% said the major reason for taking classes was to meet occupational requirements. Gaining computer/technology skills was reported as a major reason for respondents attending courses for credit and those enrolled in non-credit offerings. Findings suggest that the needs of the "technology industry" may fundamentally change the nature of non-credit coursework; however, there is some concern that most four-year colleges and universities do not accept transfer of coursework completed for high-demand certifications such as Novell and Cisco Systems. [AACC, *Headline News*, 1999.]

Over the period 1994-2000, vocational enrollments have shifted and changed as they reflect changes in matriculation goals and major areas of study declared by Peralta students. Vocational enrollment as a proportion of the total increased at College of Alameda, but decreased slightly at Laney, Merritt and Vista.

Increasingly, Peralta is taking the initiative in the process of promoting workforce development by forming partnerships with corporations and businesses, which serve to advise and inform vocational program curricula, as well as facilitate the sharing of resources, equipment and technical expertise. The ability of Peralta to pursue these initiatives will continue to be hedged by funding restrictions, which have in recent years severely hampered expansion of vocational programs, acquisitions of updated equipment, faculty development, the incorporation of new technology into the curricula, and faculty orientation to the use of high technology to teach and train students.

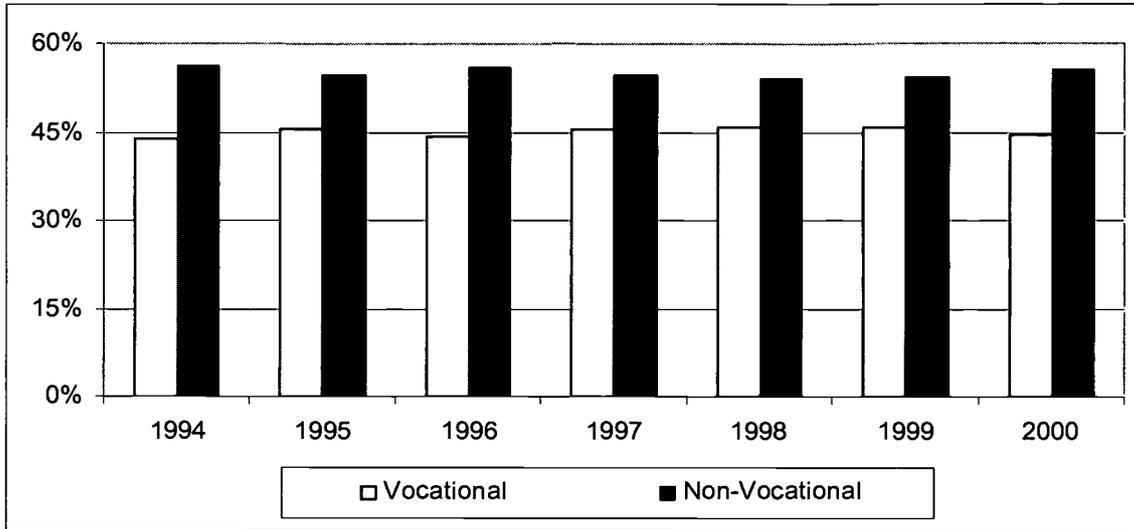

Colleges need to consider how best to balance the critical needs of vocational programs (e.g., equipment upgrading and faculty retraining) with growing demands to provide transfer preparation, ESL and pre-collegiate basic skills. In the latter regard, employers are increasingly interested in training for improvement of "workplace literacy" skills.

Basic Skills Enrollment

In addition to the primary mission of academic and vocational instruction at the lower division level, California Community Colleges are authorized to provide remedial or pre-collegiate basic skills education. Credit and noncredit courses are designed to address the needs of students not meeting the skill requisites required to be successful in associate degree applicable coursework. Subjects include remedial English reading and writing, English as a Second Language (ESL), and remedial computational skills (mathematics courses below elementary algebra).

In the fall of 2000, basic skills enrollment was 14% of total enrollment at College of Alameda, 15% at Laney, 12% at Merritt, and 6% at Vista. Laney College had the largest basic skills enrollment with over 1,400 students and over 850 students in ESL.

Compared to their overall enrollment, Asians and Hispanics/Latinos account for a higher percentage of students in ESL classes at College of Alameda, Laney and Merritt. At College of Alameda and Laney, Asians constituted the largest ethnic group enrolled in ESL classes, while at Merritt, the largest group was Hispanics/Latinos. African Americans account for a higher percentage than their overall enrollment in basic skills English and math classes at all four Peralta colleges. At Vista Hispanics/Latinos were over-represented in both basic skills math and English.

At College of Alameda basic skills enrollments increased substantially between 1994 and 1998, from 11 to 20%, but declined sharply over the next two years. Laney and Merritt followed a similar, but less extreme, pattern. Vista's basic skills enrollment has experienced a small decline, from 8% of total enrollment in the fall of 1994 to 6% in the fall of 2000.

Mathematics Basic Skills Enrollment

There were no ESL basic skills level courses offered in the fall at Vista during the period from 1994 through 2000.

Load Indicators

Full-Time Equivalent Student (FTES) is both a measure of output and a funding parameter for California Community Colleges. One FTES is equivalent to a student receiving 15 hours of instruction for 35 weeks, or 525 student contact hours (SCH). Faculty "input" is measured by Full-Time Equivalent Faculty (FTEF). One FTEF is equivalent to 15 hours of lecture.

Although total FTES for the Peralta colleges has fluctuated over the last five years, there has been a general decline. Only Vista College saw an increase in FTES, nearly 28%, from 1996 to 2000. More than half of this increase was in the area of Fine and Applied Arts. This can be attributed to the popular Multimedia program started in 1997.

At College of Alameda, over one-half of all FTES in fall 2000 was due to enrollment in five program areas: Engineering/Related Technologies, Computer Information Systems (CIS), Humanities, Mathematics, and Social Sciences. During 1996-00, areas with growth in FTES included CIS and Interdisciplinary Studies.

At Laney, nearly one-half of the total FTES in fall 2000 was due to enrollment in six program areas: Engineering/Related Technologies, Mathematics, Fine & Applied Arts, Social Sciences, Humanities, and Interdisciplinary Studies. From 1996 to 2000, areas with growth in FTES included: CIS, Consumer Ed/Home Economics, Interdisciplinary Studies, and Fine & Applied Arts.

Over one-half of the total FTES at Merritt College was due to enrollment in seven programs in fall 2000: CIS, Consumer Ed/Home Econ, Humanities, Health, Social Sciences, Education, and Public Affairs/Services. During the period 1996 to 2000, areas with growth in FTES included: Public Affairs/Services, Education, Fine & Applied Arts, and Consumer Ed/Home Economics.

At Vista College, nearly two-thirds of the total FTES in fall 2000 was due to enrollment in five program areas: Fine & Applied Arts, Humanities, CIS, Education, and Social Sciences. During 1996-00, areas with growth in FTES included: CIS, Fine & Applied Arts, Foreign Languages, Social Science, Mathematics, and Psychology.

The ratio of student attendance FTES to instructional FTEF is an indicator of "efficiency" relative to the allocation of instructional resources, the benchmark against which programs are measured is 17.5 FTES per one FTEF. The relative efficiency of instructional programs at the Peralta colleges has declined from 1996 through 2000. Programs with ratios at or above 17.5 in at least four out of five years include: Psychology, CIS, and Mathematics at College of Alameda; Biological Sciences, Psychology, Consumer Ed/Home Economics, Education, Social Sciences, Mathematics, and Computer Information Systems at Laney College; Public Affairs & Services, and Psychology at Merritt College; and Fine & Applied Arts, CIS, and Social Sciences at Vista College.

Two Highest Ranked Discipline Areas by FTES/FTEF by College

College	TOP Category	Fall 1996	Fall 1997	Fall 1998	Fall 1999	Fall 2000
		FTES/FTEF	FTES/FTEF	FTES/FTEF	FTES/FTEF	FTES/FTEF
Alameda	Psychology	18.88	19.45	27.09	24.93	23.88
	Computer Information Systems	24.84	21.08	18.74	16.37	20.23

Faculty, Staff and Administration Fall 2000

A discussion of staffing can be based either on the numbers of individuals in each group, headcount, or on the load carried by those individuals. Load takes into account the amount of time worked. Individuals, particularly faculty members, who work full-time have more of a presence in the institution than those who work part-time. Load is measured in Full-Time Equivalents (FTE). One Full-Time Equivalent Faculty (FTEF) equals 15 hours of lecture. Full-time (contract) faculty carries loads at or near one FTEF. Part-time (hourly) faculty carries no more than a 60% load. One FTE for staff and administrators equals a 40-hour week. This discussion is based on Full-time Equivalents (FTE)—or for faculty—FTEF.

At Peralta, 51% of contract load and 60% of hourly load is carried by white instructors. White students make up only 22% of the student body of the four colleges. African Americans make up 30% of the student body and carry 30% of Peralta's contract FTEF, but only 19% of hourly FTEF. Hispanics carry 7% of faculty FTEF and make up 12% of the student body. Asians carry only 10% of faculty FTEF, while comprising 24% of the student body

While 60% of the student body is female, total faculty FTEF is split evenly (50/50) between males and females. Males carry the majority of contract faculty FTEF (54%). There is a near even distribution of hourly FTEF between males (48%) and females (52%).

The average age of Peralta faculty is 51 years. More than two-thirds (69%) of contract faculty is age 50 or over—nearly one quarter are age 60 or over (22%). College of Alameda has the oldest full-time faculty (average age, 55). Vista has the youngest (average age, 51). The average age of full-time faculty at Laney and Merritt is 54. The average age of part-time faculty is 48 years.

Of instructional load, contract faculty carries 49% and hourly 51%. Alameda has the highest ratio of contract load (63%), while Vista has the lowest (32%).

Districtwide, 84% of all FTE is allocated to instruction, student services or academic administration. Most of the remainder is allocated to general institution and planning functions.
